

Speaking of Christmas Gifts..

How about the

SCIENCE NEWS-LETTER?

You are a reader of this publication yourself—you enjoy the result of the effort we put forth to make it interesting and worth-while—why not give the few individuals you really call friends the opportunity of learning of *Progress* . . while it still is news?

We are making a very special holiday offer: You may renew your own subscription (whatever the expiration date) at the usual rate of \$5.00 per year—then each additional subscription will be just \$4.00—instead of \$5.00. You may purchase any number—ANY subscription after the first one will be \$4.00.

If you are unacquainted with the SCIENCE NEWS-LETTER may we say that it presents the NEWS in every scientific field—

months, even years before such information may be obtained in book form—it is a PERSONAL magazine being our only product that is available to the individual. It is clippable and the index feature facilitates the filing of each article in any system. The magazine is so arranged that each bit of copy may be clipped without disturbing even one word of other editorial matter. For your scientist friend—for the interested layman—for the student of science!

Just fill as many names as you wish—we shall take great pleasure in sending out gift cards telling of your gift.
