A Product of  Precision

# THE *Leica* CAMERA

**Explorers, Scientists, Engineers, Professional and Amateur Photographers throughout the world endorse this fine camera**

A Leica is now with the Byrd Antarctic Expedition. Mr. Nicholas Haz, F. R. P. S., who has at his command practically every type of camera, has found many uses for his Leica. Mr. Willard D. Morgan, noted writer, traveler and photographer, adds his name to the long list of well-known owners of Leica Cameras.

Each recognizes the versatility, the ease of operation and the compact usefulness of the Leica. Each appreciates the marvelous workmanship, accuracy and precision of this remarkable camera.

Technically, the reasons for the popularity of the Leica are many. It is the smallest roll film camera

with a focal plane shutter. Equipped with a Leitz Anastigmat F.3.5, 50 mm. lens with speeds of 1/20 to 1/500 seconds. Weighing less than a pound it can fit in a vest pocket with ease. On one load of standard cinema film, it will take 36 pictures of double frame size, from which enlargements up to 12"x18" may be made without loss in definition or detail. Positive film made from negative for screen projection.

Landscapes, portraits, interiors, panoramic strips, even photomicrographs are every day jobs for the Leica. It is the finest camera obtainable of its type.
