

WITH PINK EYES

Did you ever see a pink-eyed snake? This albino snake, reported to be the first of its kind on record, is being exhibited in the Florida Reptile Institute at Silver Springs, Florida. It is a southern hog-nosed species, commonly called "spreading adder" (*Heterodon simus*) and differs from others of its kind only in coloration, being white with pale spots on the body. Its eyes are the pink ones characteristic of albinos.

TIVE PHYSIOLOGY—J. M. Robson—*Blakiston's*, \$4.

RECORDING OF LOCAL HEALTH WORK—W. F. Walker and C. R. Randolph—*Commonwealth Fund*, \$3.*

SEX-HYGIENE—Alfred Worcester—C. C. Thomas, \$2.50.

ELECTRONICS—Ralph Hudson—*Wiley*, \$2.

Is Your Thinking - Cap on STRAIGHT?

MAYBE so; maybe not. Straight thinking is quite rare. Read the story of straight thinking in

The Search for Truth

ERIC TEMPLE BELL

Four pinnacles mark the story—the first in Egypt 6000 years ago; the last as recent as 1930. Other straight thinking was sandwiched in between—and a lot of the turbid variety.

Here's a mathematician dealing with the mysteries of mathematical reasoning, of cold logic; with infinities and absolutes and the fourth dimension.

And he asks no more of the reader (in the way of equipment to scale these heights and learn what straight thinking means) than may well be possessed by any eighth grade child.

Dull? Well, hardly. Quite the contrary—amusing anecdotes, lively style; good fun all the way. Published Oct. 17. \$3.00.

Weather Proverbs and Paradoxes

WILLIAM J. HUMPHREYS

The second edition of a little book that has become justly famous. All the old saws gathered together to show what truth is in them.

A reasonable study will make you weather-wise. The weather report you get from the

heavens is hours later than that from the daily paper—and it's not too difficult to read. The author is physicist of the U. S. Weather Bureau.

A delightful series of short chapters on the moody skies, well illustrated. Published Oct. 20. \$2.00.

Civilized Life

KNIGHT DUNLAP

An internationally known psychologist here presents his mature reflections on social psychology—the inner urges that make civilized life what it is, that create its organizations political, martial, and religious; its institutions like marriage and the family; its progress and its functions.

You'll have a clearer view of society if you read *Civilized Life*—a wholesome view, based on ascertained fact, not Utopian fancy. \$4.00.

Before the Dawn

By "JOHN TAINE"

It's fiction—fantascience; a warp of science and a weft of fantasy. The tale of the Langtry "televisor" which makes possible the re-projection of scenes which took place aeons before man trod the earth. Nature in one of her grand rampages of fire and flood, the end of the great saurians—all, by the literary device, through the senses of actual eye-witnesses. "John Taine" is Eric T. Bell, Professor of Mathematics, California Institute of Technology. \$2.00.
