“Adventures in Research”

For years, audiences have watched with interest and amazement as Dr. Phillips Thomas of Westinghouse gave his famed lecture demonstration—“Adventures in Research”.

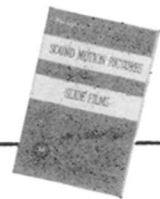

Now, many more thousands will be able to see and hear this intriguing explanation of electronic wonders—as a Westinghouse sound motion picture. The film gives a clear explanation of each device being demonstrated and describes its practical uses in industry, transportation, communication.

In spite of its rather technical subjects, explanations are so clearly made that the film will be of absorbing interest to any adult audience, as well as to high school or college groups. Here is an important new contribution toward scientific education in America. For more information about this film and other educational films, use the coupon below to send for our catalog listing sound motion picture and slide films available for use in schools.
