Mathematics magazines get 100 percent shut out by the 4 percent who read non-fiction—according to a recent report in Survey Graphic. This is regrettable when the lives of all of us are concerned with mathematical processes and millions use them in their professions directly or indirectly.

The **Mathematics Magazine** is attacking the solution of this problem, not by omitting profound papers, but by broadening its horizon, in both applied and pure mathematics.

This new trail will be blazed in the light of our reader's needs and their suggestions.

Already the following features have been introduced:

- 1) Emphasis on expository papers.
- 2) Substitution of published discussions of papers for the usual refereeing, thus preventing long delays in publication and providing elucidation, as well as testing the papers.
- 3) Publication of preparation needed to read each paper.
- 4) Publication of biographic sketches of authors.
- 5) Submission of readers' questions and problems of all sorts, (signed or unsigned) for other readers to answer.
- 6) Publication in "Mathematical Miscellany", of interesting mathematical news items and short useful discoveries, especially in the elementary field.

Published bi-monthly except July-August. Subscription \$3.00. Address, Mathematics Magazine, Dept. C, 405 Hilgard Avenue, Los Angeles 24, California.
