Announcing 6 New Charts on NUCLEAR PHYSICS

One of the most important offerings ever presented by Westinghouse School Service is this set of six wall charts on nuclear physics. To the teacher and student alike, they will prove invaluable in explaining this new science and in showing its significance in the world today.

The charts—lithographed in two colors—are a necessity in modern science classrooms. Included with each set is a 32-page booklet containing supplementary information on nuclear physics.

The six charts are:

1. **Particles of Nuclear Physics:** Portrays the ten basic particles important in the science of nuclear physics.
2. **Structure of the Nucleus:** Explains how nuclei are put together and charts 635 isotopes of the elements.
3. **Nuclear Reactions:** Depicts natural and man-made nuclear reactions, including nuclear fission.
4. **Tools of the Nuclear Physicist:** Portrays the important types of apparatus for detecting and inducing nuclear reactions.
5. **Using Nuclear Energy:** Shows five areas for the useful applications of atomic energy.
6. **Progress of Nuclear Physics:** Charts the major theoretical, experimental and engineering developments in nuclear physics.

CARRYING hundreds of telephone calls, coaxial cable runs through many lonely miles. Far from towns and people, master amplifying stations stand guard with a new automatic alarm system developed by Bell Telephone Laboratories.

At a city terminal, the man on duty checks by laying a log sheet over a glass window, dialing a master station hundreds of miles away. At once the station gives an account of itself, lighting lamps under the log sheet to report any abnormal operating condition before it becomes an emergency.

But when something happens that threatens serious trouble, the apparatus acts at once—maybe by switching in a spare coaxial—and calls a distant test board by ringing a bell. Sometimes he can take further steps by remote control; if not, he knows exactly how to brief the nearest repair crew.

With this new alarm system, maintenance men need not be stationed at isolated points, just waiting for something to happen. Instead, they live in their home communities. This makes for better work . . . and better telephone service.
