Better Synthetic Rubbers

➤ BETTER synthetic rubbers for industry were made known to the American Chemical Society meeting in Atlantic City, N. J.

Withstanding dry heat up to 400 degrees Fahrenheit and at the same time resistant to oil, gasoline and sunlight deterioration, a new polyacrylic and hydrocarbon synthetic called Hycar PA was reported by H. P. Owen of B. F. Goodrich Chemical Co., Cleveland.

The new Goodrich rubber will be used for hose, protective coatings on glass and asbestos, insulation on wire, conveyor belts and particularly where light or pastel colored products requiring color permanence are needed. White goods made from this rubber will not discolor in the sunlight.

New Neoprene Rubber

A new kind of neoprene rubber which will not deform materially under the weight of vibrating machines was announced by D. B. Forman, L. R. Mayo and R. R. Radcliff of Du Pont's Organic Chemicals Department. It will have particular application in mounting motors where the rubber vibration dampener is subjected to heat and oil which neoprene resists.

A new method of increasing the sunlight resistance of neoprene rubbers was reported by D. C. Thompson and N. L. Catton of the same company. The weather resistance of colored neoprene products is increased by use of compounding materials that are clays although other additions to the rubber do decrease weather resistance.

Science News Letter, October 1, 1949

The highly valuable properties of beryllium alloys, particularly the copper-beryllium alloys, have greatly increased the metal's industrial importance in recent years.

The chances for exposure to beryllium dusts, Dr. DuBois said, are fairly numerous in industry and may be encountered during virtually all stages of beryllium production.

SCIENCE NEWS LETTER

VOL. 56 OCTOBER 1, 1949 No. 14

47,300 copies of this issue printed

The Weekly Summary of Current Science, published every Saturday by SCIENCE SERVICE, Inc., 1719 N St., N. W., Washington 6, D. C., North 2255. Edited by WATSON DAVIS.

Subscription rates: 1 yr., \$5.50; 2 yrs., \$10.00; 3 yrs., \$14.50; single copy, 15 cents, more than six months old, 25 cents. No charge for foreign postage.

Change of address: Three weeks notice is required. When ordering a change, please state exactly how magazine is now addressed. Your new address should include postal zone number if you have one.

Copyright, 1949, by Science Service, Inc. Reproduction of any portion of SCIENCE NEWS LETTER is strictly prohibited. Newspapers, magazines and other publications are invited to avail themselves of the numerous syndicate services issued by Science Service. Science Service also publishes CHEMISTRY monthly and THINGS of Science monthly.

Printed in U. S. A. Entered as second class matter at the post office at Washington, D. C. under the act of March 3, 1879. Established in mimeographed form March 18, 1922. Title registered as trademark, U. S. and Canadian Patent Offices. Indexed in Readers' Guide to periodical literature, Abridged Guide, and the Engineering Index.

Member Audit Bureau of Circulation. Advertising Representatives: Howland and Howland, Inc., 393 7th Ave., N.Y.C., Pennsylvania 6-5566 and 360 N. Michigan Ave., Chicago. STATE 4439.

SCIENCE SERVICE

The Institution for the Popularization of Science organized 1921 as a non-profit corporation.

Board of Trustees—Nominated by the American Association for the Advancement of Science: Edwin G. Conklin, Princeton University; Karl Lark-Horowitz, Purdue University; Kirtley F. Mather, Harvard University. Nominated by the National Academy of Sciences: Harlow Shapley, Harvard College Observatory; R. A. Millikan, California Institute of Technology; L. A. Maynard, Cornell University. Nominated by the National Research Council: Ross G. Harrison, Yale University; Alexander Wetmore, Secretary, Smithsonian Institution; Rene J. Dubos, Rockefeller Institute for Medical Research. Nominated by the Journalistic Profession: A. H. Kirchhofer, Buffalo Evening News; Neil H. Swanson, Baltimore Sun Papers; O. W. Riegel, Washington and Lee School of Journalism. Nominated by the E. W. Scripps Estate: H. L. Smithton, E. W. Scripps Trust; Frank R. Ford, Evansville Press; Charles E. Scripps, Scripps Howard Newspapers.

Officers—President: Harlow Shapley, Vice President and chairman of Executive Committee: Alexander Wetmore, Treasurer: O. W. Riegel, Secretary: Watson Davis.

Staff—Director: Watson Davis. Writers: Jane Stafford, A. C. Monahan, Marjorie Van de Water, Lydia Schweiger, Ann Ewing. Science Clubs of America: Joseph H. Kraus, Margaret E. Patterson. Photography: Fremont Davis. Sales and Advertising: Hallie Jenkins. Production: Priscilla Howe. In London: J. G. Feinberg.

BIOCHEMISTRY

Beryllium Poisoning Aid

➤ AN ANTIDOTE or treatment for beryllium poisoning may be on the way, thanks to researches by scientists at the University of Chicago Toxicity Laboratory.

Beryllium, used in making fluorescent lights and in many other industrial processes, poisons by interfering with the body's use of sugars and starches, these scientists, Drs. Kenneth P. DuBois, John Doull and Kenneth W. Cochran, announced at the meeting of the American Chemical Society in Atlantic City, N. J.

When beryllium dust is breathed into the lungs, or when the metal gets into the body in other ways, it competes with the calcium and magnesium from food. Both calcium and magnesium are needed for the breakdown of sugars and starches to give energy. Beryllium apparently can combine with the same compounds in the cell that

calcium and magnesium can combine with, but it cannot perform the vital functions of these metals. When it takes their place it therefore blocks the sequence of normal chemical events in the body cells.

The results show up in the serious lung damage which is one form of beryllium poisoning or in bone cancer, rickets and a general failure of metabolism.

The Chicago toxicologists did not report a treatment for beryllium poisoning, but Dr. DuBois said:

"After the mechanism of action of a toxic substance is understood, then attempts to treat the condition can be undertaken in a scientific manner. Fundamental research on the chemistry of beryllium poisoning may lead to the development of an effective means of therapy (treatment)."

Question Box

BIOCHEMISTRY

What has been found to differ in the sexes with age? p. 214.

BIOLOGY

Why would it be difficult to keep a germ warfare weapon trial secret? p. 210.

CHEMISTRY

In what ways is a new synthetic yarn outstanding? p. 218.

What are the advantages of a new kind of odorless paint? p. 214.

CHEMISTRY-NUTRITION

What method will make possible cheaper production of protein substances? p. 213.

Photographs: Cover, p. 219, Du Pont Co.; p. 211, Ford Motor Co.; p. 213, Allis-Chalmers; p. 215, Firestone Tire and Rubber Co.; p. 218, Fremont Davis.

GENERAL SCIENCE

What are some of the steps by which we may lay the foundation for a police state? p. 215.

MEDICINE

Why is there a national wild mouse hunt on? p. 221.

NUCLEAR PHYSICS

What are some of the ways the Russian atomic explosion might have been detected? p. 211.

PHYSICS-MATHEMATICS

What may give the earth its magnetic field? p. 222.
