Who in the world
wants a
smog box?

Only an engineer would think of a practical use for this gadget. Faced with the problem of what will happen to street lighting units where smog shrouds a city, this "box" becomes a vital piece of testing equipment. For, with it, the effects of 20 years of corrosion exposure can be determined in 1,000 hours.

Creative engineers are constantly challenged to develop tests and testing devices that will reveal the true character-

istics of the products of their imagination. For great names in business cannot risk reputations when they introduce new or improved merchandise.

Over the years, Westinghouse has recognized the importance of constant research in its development of new products and improvement of present products . . . research, proved by exhaustive tests. That is why we are always prepared to fulfill the commitment . . .
