

PSYCHIATRY

Patients Drug Will Help

► THE PSYCHIATRIST who probably has had the longest experience with one of the new tranquilizing drugs in mental sickness now predicts how many with different kinds of illnesses will be helped by it.

The drug is chlorpromazine. The psychiatrist who made the predictions at the American Psychiatric Association meeting in Chicago is Dr. N. William Winkelman Jr., of the Sidney Hillman Medical Center, Philadelphia. Based on 1,090 patients followed for three years, he predicts that:

1. Of 20 psychoneurotic patients with anxiety, 17 will be benefited.

2. Of 20 with conversion reactions, 15 will be helped.

3. Ten of 20 with phobias, 10 of 20 with secondary depressive phenomena and eight of 20 with obsessions will be helped.

Of 130 schizophrenic patients treated, 61% were improved moderately or better, while an additional 19% were freed from all symptoms, Dr. Winkelman reported.

Of 115 senile patients, 86% treated responded well or better.

Of the patients who would formerly have been hospitalized, 40% were treated as outpatients.

Encouraging results with two newer tranquilizing drugs were reported at the meeting. One of these, promazine, is derived from chlorpromazine and shows promise especially in immediately controlling acute agitation in mental patients, in alcoholics with delirium tremens and in patients on narcotic drug withdrawal, Dr. John D. Schultz of Georgetown University and District of Columbia General Hospital, Washington, reported.

The other relatively new drug, Frenquel, helps about half the schizophrenic patients, Dr. John T. Ferguson, Traverse City, Mich., State Hospital, reported.

A tranquilizing drug with a broader range of application and fewer side effects than chlorpromazine is still needed, Dr. Paul H. Hoch, Commissioner of Mental Hygiene for New York State at Albany, N. Y., said. He credited tranquilizing drugs with being a major factor in the increased rate

at which patients in New York mental hospitals have recovered enough to go home.

One of the "most powerful" of the tranquilizing drugs is Miltown, in the opinion of Dr. Veronica M. Pennington of Mississippi State Hospital, Whitfield, Miss.

It has brought "considerable improvement" to four out of five patients with great improvement in one-third, she reported.

GEOPHYSICS

Outer Space Radio Noise Tuned in From Satellite

► RADIO NOISE from outer space now shut out by the earth's atmosphere may be listened to from earth satellites to be launched during the International Geophysical Year.

Dr. Homer E. Newell Jr. of the Naval Research Laboratory said this was one experiment being considered for the satellites.

He told a joint meeting of the International Scientific Radio Union and Institute of Radio Engineers in Washington the radio observations would be made by putting a radio receiver on the man-made satellite, tuning it in on a frequency now cut off by the earth's atmosphere. When this antenna picked up signals from outer space, another radio would flash the message back to earth at a different frequency that would penetrate the ionosphere.

Dr. Newell also reported that the U. S. technical panel on the earth satellite program, of which he is a member, is considering measuring the amount of hydrogen in interplanetary and interstellar space.

Other experiments suggested for the satellite include measurements of dust and micrometeors in space and their erosive effects upon the satellite's surface; observation and measurement of the sun's radiation in the ultraviolet and X-ray wavelengths, and measurement of the earth's albedo, a quantity important to weathermen.

3-DIMENSIONAL

Cut Out
Model
of the
BRAIN
only
\$3.98

It is difficult for the student of anatomy to get proper three-dimensional views of the human brain and a clear idea of the relative positions of the parts which go to make it up. This model, which has been made by a student for students will help overcome this difficulty. By simple means and with comparatively little effort the student will be able to acquire a three dimensional view of the anatomy of the brain. This model gives a somewhat simplified but nevertheless true picture of the anatomical details. The student may elaborate the model to adapt it to his own personal needs by adding in color any information necessary. Ideal for class work; special rates available for group purchases.

ALADDIN MAGIC COOKER

THE NEWEST COOKING IDEA IN MANY A YEAR—SCIENTIFICALLY DESIGNED TO DO

WHAT NO OTHER COOKER CAN DO

- Flavor that is out of this world
- Dry-fries, chops, chicken, bacon, eggs
- Cooks both sides at the same time
- Prevents burning orders or spattering
- Made of heavy gauge polished Aluminum
- Special Cook Book FREE
- Taste enjoyment—real magic—Be a gourmet

8", 1 1/2 QT.—\$7.95

11", 3 QT.— 9.95

Add 50¢ West of Miss.
