## NOVAS DEL MENSE IN INTERLINGUA

► **Biochimia.**—Inter le proteinas muscular il ha un que es cognoscite al biochimicos como tropomyosina. Iste tropomyosina—como omne proteinas—contine un numero de amino-acidos. Drs. K. Laki e D. R. Komitz del statounitese Instituto National de Sanitate ha studiate le ordine del amino-acidos in tropomyosina ab vermes, homaros, pisces, conilios, etc., e etiam ab humanos. Illes ha trovate que le scala evolutiounari es reflectite in un ordine progressivamente plus regular e systematic in le arrangiamento de amino-acidos de tropomyosina.

► **Zoocosmetica.**—In phocas e leones marin le musculo ejice a certe tempores un dulce odor que pare attraher le femininas. Dr. J. E. Hamilton, qui habita le Insulas Falkland e qui ha discoperite le supra-mentionate facto, insiste in su reporto que il se tracta de un odor que esserea ben acceptable como perfume secundo nostre standards human.

► **Agronomia.**—A Anand in India un fabrica esseva recentemente installate pro le production de lacte pulverisate. On spera que su rendimento diurne va tosto esser 12,500 libras. A parte le lacte pulverisate, le fabrica va etiam producere crema sterilisate, nutrimento pro neonatos, e lactosa. Le aspecto inusual de iste reporto es que il se tracta non de lacte de vacca sed de lacte de buffalo.

► **Medicina.**—Dr. V. H. Krishnamurthy del Instituto Gouvernemental de Vaccinologia a Bangalore in India ha publicate in le periodico german "Die Naturwissenschaften" un reporto de su discoperta que in le sanguine de patientes de varicella il ha un augmento per quasi 100 pro cento in le concentration de globulina beta e minus frappante augmentos del concentration de globulina alpha<sub>2</sub> e de globulina gamma. Iste alteraciones pare esser de valor diagnostic. Illos esseva constatare in 40 casos consecutive de varicella. Le metodo usate in le studio esseva electrophoresis a papiro.

► **Agronomia.**—Le fermberos de Singapore e Malaya usa, como alimento pro gallinas, lacte de butyro in forma de un pulvere de color verde. Iste pulvere es importate ab Nove Zelandia. Illo es verde non proque le vaccas de Nove Zelandia produce lacte verde sed proque le industria del productos de lacte in Nove Zelandia misce lo con un colorante pro facilitar su distinction ab pulveres de lacte que es destinate al consumption human.

► **Cosmologia.**—On crede (e de vero: on sape) que un grande portion del radiosignales diffundite ab fontes cosmic es absorbite per le copertura atmospheric del terra e escappa assi al detection per le moderne antennes de radioreception astronomic. On plana equipar futur satellites artificial con radioreceptores adjustate a definite frequentias cosmic e con diffusores capace a traducere le signales cosmic a alte frequentias e a redifunder los verso le terra.

► **Energia.**—Un typo de potentissime "batteria" resulta, al minus theoricamente, del recente discoperta que atomos de varie gases perde lor irresistibile tendentia a combinar se in moleculas si post lor isolation fortiate illos es includite in un certe maniera in solidos con temperaturas in le vicinitate de zero absolute. Le recombination de tal atomos in moleculas normal es accompaniate per le liberation de enorme energias. On specula que forsan on pote regularisar iste liberation e alora servir se de su energia pro objectivos practic.

► **Geophysica.**—Le Servicio Cartographic del

statounitese Fortias Armate annuncia que le plus recente studios permitte un correction del magnitudine traditionalmente citate pro le radio del terra al equator. Le ancian valor esseva erronee per un excesso de plus que 100 m. Le novo valor es 6,378,260 m. Le plus alte precision possibile in le determination del radio terrestre es indispensabile pro le exacte calculation del orbita de satellites artificial e etiam pro le calculation del curso de ballistic missiles intercontinental.

► **Archeologia.**—In un excavation a St. Albans in Anglaterra on ha discoperte un colonia de 18 vermes de terra vivente paciblemente al fundo de un fossa que esseva aperte al tempore del romanos sed que deposit ha essite coperite per structuras e stratos de terra amontante a un spissitate de 5 m. Il es necessari supponer que le vermes forma un colonia de descendentes racialmente pur de un ancestre commun que viveva quasi 2,000 annos retro.

► **Litteratura Scientific.**—In textos scientific publicate in le paises anglo-saxone, il es customari servir se del symbolos \* e † pro referer le lector a certe typos de notas al pede del pagina. Le occurrentia del secunde de iste symbolos post le nomine de individuos ha resultate in multe miscomprehensiones tragicomic, proque in le majoritate del paises de civilisation occidental le presenta de † post un nomine personal indica que le individuo in question es morte. Dr. Ch. F. Richter del Laboratorio Seismologic a Pasadena ha initiate un campania pro le elimination del ambigue symbolo.

► **Recercas de Cancere.**—Le musca drosophila passa ab le stadio de pupa al stadio adulte sub le effecto de un hormon que entomologos appella le hormon de pupation. On ha constatare que le suppression del hormon de pupation resulta in drosophilas in le formation de crescentias canceroide. Cellulas ab iste crescentias pote esser culturate e se comporta alora como cellulas cancerose. Lor conducta pote esser renormalisate per le addition del hormon. Dr. C. H. Haddox del Universitate Louisiana, le discoperto de iste factos, tenta nunc obtener un sufficiente quantitate del hormon de pupation pro poter essayar lo como medicacion anticancerose in experimentos animal.

► **Agronomia.**—Vaccas in le Statos Unite monstra le disquietante tendentia a parturir vitellos nanos. Le nanismo bovin es heritable per genes que debe esser identificate si on vole eliminar le vaccas que es lor transmittitores. Si iste objectivo non es attingite, on calcula que tosto cata septime vitello va esser nano. Le recerca de methodos de identification del genes de nanismo ha non ancora succedit. Le plus promittente es un technica roentgenologic que, nonobstante, presenta ancora grande difficultates de standardisation.

► **Gerontologia.**—On sape que le capacitate respiratori de humanos se reduce in le curso del vita. Secundo recercas al Instituto National del Corde a Baltimore, iste reduction—specialmente ante le etate de 50—non corresponde a un reducite volumine del pulmones o a un reduction de nostre fortias respiratori. Illo resulta plus tosto del facto que in le curso del vita il ha un inexplicable augmento del contento de aere stabile in le pulmones. Iste contento stabile es le volumine de aere que remane in le pulmones a transverso le cyclo respiratori, i.e. le volumine de aere que non es ejicite mesmo per le plus energetic effortio de expiration.

## Reading Interlingua

► YOU CAN READ Interlingua if you had no more than one semester of high school French or Spanish or Latin and flunked it. You can read and understand a great deal of it even if you never had contact with any foreign language.

Send this page to an acquaintance abroad and tell him that he can get additional information about Interlingua from Alexander Gode, SCIENCE SERVICE's Interlingua Division, 80 E. 11th St., New York 3, N. Y.

Science News Letter, May 26, 1956

### SCIENCE NEWS LETTER

VOL. 69 MAY 26, 1956 NO. 21

The Weekly Summary of Current Science, published every Saturday by SCIENCE SERVICE, Inc., 1719 N St., N. W., Washington 6, D. C. NORTH 7-2255. Edited by WATSON DAVIS.

Subscription rates: 1 yr., \$5.50; 2 yrs., \$10.00; 3 yrs., \$14.50; single copy, 15 cents, more than six months old, 25 cents. No charge for foreign postage.

Change of address: Three weeks notice is required. When ordering a change please state exactly how magazine is now addressed. Your new address should include postal zone number if you have one.

Copyright, 1956, by Science Service, Inc. Reproduction of any portion of SCIENCE NEWS LETTER is strictly prohibited. Newspapers, magazines and other publications are invited to avail themselves of the numerous syndicated services issued by Science Service. Science Service also publishes CHEMISTRY (monthly) and THINGS of Science (monthly).

Printed in U. S. A. Entered as second class matter at the post office at Washington, D. C., under the act of March 3, 1879. Acceptance for mailing at the special rate of postage provided for by Sec. 34.40, P. L. and R., 1948 Edition, paragraph (d) (act of February 28, 1925; 39 U. S. Code 283) authorized February 28, 1950. Established in mimeographed form March 13, 1922. Title registered as trademark, U. S. and Canadian Patent Offices. Indexed in Reader's Guide to Periodical Literature, Abridged Guide, and the Engineering Index.

Member Audit Bureau of Circulation, Advertising Representatives: Howland and Howland, Inc., 1 E. 54th St., New York 22, Eldorado 5-5666, and 435 N. Michigan Ave., Chicago 11, Superior 7-6048.

### SCIENCE SERVICE

The Institution for the Popularization of Science organized 1921 as a non-profit corporation.

Board of Trustees — Nominated by the American Association for the Advancement of Science: Paul B. Sears, Yale University; Karl Lark-Horovitz, Purdue University; William W. Rubey, U. S. Geological Survey. Nominated by the National Academy of Sciences: Harlow Shapley, Harvard College Observatory; George W. Corner, Rockefeller Institute for Medical Research; Edward U. Condon, Berkeley, Calif.; Nominated by the National Research Council; Leonard Carmichael, Smithsonian Institution; Jerome Hunsaker, Massachusetts Institute of Technology; I. I. Rabi, Columbia University. Nominated by the Journalistic Profession: Michael A. Gorman, Flint Journal; Neil H. Swanson, Ruxton, Md.; O. W. Riegel, Washington and Lee University. Nominated by the Scripps Estate: John T. O'Rourke, Washington Daily News; Charles E. Scripps, Cincinnati, Ohio; Edward J. Meeman, Memphis Press-Scimitar.

Officers — President: Leonard Carmichael; Vice President and Chairman of Executive Committee: Charles E. Scripps; Treasurer: O. W. Riegel; Secretary: Watson Davis.

Staff — Director: Watson Davis. Writers: Jane Stafford, Marjorie Van de Water, Ann Ewing, Howard Simons, Dorothy Schriver, Helen M. Davis. Science Clubs of America: Joseph H. Kraus, Margaret E. Patterson. Photography: Fremont Davis. Production: Priscilla Howe, Marcia Nelson. Interlingua Division in New York: Alexander Gode, 80 E. 11th St., GRamercy 3-5410.
