## NOVAS DEL MENSE IN INTERLINGUA

► **Biologia Marin.**—Al laboratorios del Commission Piscatori a Newport in Oregon, on pote vider un vive crabba que es completamente dispoviste de coloration. Iste raritate es causamente observate pro determinar si su albinismo persiste post le proxime muta. Crabbas adulte del specie in question muta generalmente un vice per anno. Un sol previe occurrentia de albinismo in un crabba—e isto octo annos retro—ha esseite notate al laboratorios piscatori de Newport.

► **Pedagogia.**—Le patentes del mense include un pro un puppa que pote esser calefacite electricamente. Le puera que joca con iste puppa pote mesurar su febre. On dice que isto es un excellente preparation pro infirmeras futur. (Illas apprende plus tarde que febres in humanos non comencia e non cessa quando on presa un button.)

► **Musica.**—Ha esseite inventate un organo electric que functiona como un harmonica buccal. Le siffllo establi contactos electric, e istos resulta in le sonos desireate. On non considera como multo probabile que iste tipo de organo va reimplaciar le typo traditional.

► **Psychiatria.**—In le diagnose de schizophrenia, Dr. D. R. Gorham del Universitate Baylor in Texas ha utilitate con bon successo un test requirente le interpretation de proverbios currente. Tal proverbios es generalmente abstractioes, e schizophrenicos non es capace a comprender ullo que non es concrete. In un population hospitalari mixte, le test de Dr. Gorham recognoscetva 80% del subjectos normal e 75% del schizophrenicos. Evidentemente, le test ha nulle fortia decisiva, sed illo representa un benvenite adjuta diagnostic.

► **Dentisteria.**—Un decennio de recercas per Drs. H. T. Kelly e D. J. Goodfriend de Philadelphia ha resultate in le constatacion que intere individuos examinate 96% del suffritores de vertigine habeava un defective occlusion dental. Le duo doctores crede que imperfectiones del occlusion dental affice le organos de equilibrio in le aure.

► **Entomologia.**—Le supposition que muscas domestic non pote superviver plus que 48 horas sin aqua ha esseite disproveate per Dr. B. Greenberg del Universitate Illinois. Ille trova que muscas pote mantener se super un dieta completamente sic durante circa dece dies.

► **Linguistica.**—In un discurso presentate al reunion annual del Association American de Linguis Moderne, Dr. Alexander Gode de Science Service urgeva le utilisation de interlingua como phase preparatori in le instruction del linguis moderne. Ille explicava que in le transition ab un lingua occidental al altere, le studente beneficia de interlingua como stabile "tertio de comparation."

► **Entomologia.**—Le volo de insectos pote attinger un velocitate maximal de circa 45 km per hora pro distancias extense e de 55 km per hora in non-continue "spurts." Iste datos esseite calculate (non mesurate) per Dr. B. Hocking del Universitate Alberta in Canada super le base de determinations del requirements de energia in insectos in volo, de lor capacitate de transportar nectar (i.e. lor combustibile), e del efficacia de lor modo de propulsion.

► **Psychiatria.**—Multa formas de retardation mental, predice Dr. L. Pauling del Instituto Technologic de California, va esser recognoscite como pertinente al gruppo de morbos designabile como "morbos molecular." In tal morbos,

secundo le definition de Dr. Pauling, le structura de certa typos de moleculas vital devia ab le norma in consequentia de un chimismo defective. In tanto que tal defectos reflecte le insuficiente o absentia del correspondente enzymas, illos pote esser remediate per le implantation de substantias chimic—si tosto que le mechanismo in question es cognoscete e que le substantias in question pote esser synthetisate.

► **Physica Atomic.**—Le sexto isotopo producite naturalmente per radios cosmic esseva trovate per Dr. P. S. Goel del Instituto Tata a Bombay in specimens de pluvia colligite in terreno montanios e sin possibilitate de infection industrial. Il se tracta de sulfure-35 que secundo Dr. Goel, resulta del bombardamento de argon per radios cosmic. Le cinque previemente cognoscite isotopos de production extraterrestre es un de carbon, un de beryllium, un de hydrogено, e duo de phosphoro.

► **Astronomia.**—Le firma Carl Zeiss de Jena in Germania annuncia le disponibilitate commercial de un plus parve e minus costose modello de su famose planetario. Le nove producto ha un domo de un diametro de inter 7 e 9 m. Su capacitate es 50 a 90 personas. Illo rende visibile circa 5000 stellas, omnes que es visible in le natura al oculo inarmate. Su apparatura de projection consiste de 31 projectores individual disponite al superficie de un sphera cave.

► **Physiologia.**—Aspectos psychosomatic del relation sexual es sub investigation in columbas per Dr. D. S. Lehrman del Universitate Rutgers. Su intention es demonstrar per exemplo que vider a transverso un vitro un masculo pote inducer un columba feminin a poner un ovo ben que il ha nulle possibilitate de contacto physic. In iste connexion un question de interesse special es si il ha un differentia inter le reaction de un columba virgine e le reaction de un columba con experientias sexual.

► **Inventiones.**—Dirk Van Douwe de Rotterdam in le Pais Basse ha obtenite in le nomine del firma hollandese, N.V. Maatschappij-Koffiepelserij, un patente statounitese pro le invention de un assortitor photo-electric de parve objectos, per exemplo granos de caffé, etc. Le aspecto inusual del invention es que illo classifica le objectos secundo lor color.

► **Physica Nuclear.**—Un cathedra professorial, portante le nomine del decedite physico Enrico Fermi, va esser establete al Instituto de Studios Nuclear que es associate con le Universitate Chicago. Le presidente del Laboratorios Telephonic Bell, Dr. M. J. Kelly, ha organisate un committee de varie autoritates qui va occupar se del collection del requisite medios finanziari.

► **Bacteriologia.**—Al Universitate Columbia e al Jardin Botanic de New York, studios comparative de racias innocue de *Agrobacterium tumefaciens* e de racias capace a producer tumores in certe plantas ha resultate in le constatacion que le virulentia in iste species depende del presentia de acido disoxyribonucleic in le genes del bacterios individual. Le extraction de iste substantia ab un racia virulente rendeva lo innocue. Su addition a un racia innocue rendeva lo virulente. Recercas de iste genere contribue al disveloppamento de methodos pro modificar le character de bacterios per medios chimic.

## GENERAL SCIENCE Reading Interlingua

► YOU CAN READ Interlingua if you had no more than one semester of high school French or Spanish or Latin and flunked it. You can read and understand a great deal of it even if you never had contact with any foreign language.

Send this page to an acquaintance abroad and tell him that he can get additional information about Interlingua from Alexander Gode, SCIENCE SERVICE's Interlingua Division, 80 E. 11th St., New York 3, N. Y.

## SCIENCE NEWS LETTER

VOL. 71 JANUARY 26, 1957 NO. 4

The Weekly Summary of Current Science, published every Saturday by SCIENCE SERVICE, Inc., 1719 N. St., N. W., Washington 6, D. C., NORR 7-2255. Edited by WATSON DAVIS.

Subscription rates: 1 yr., \$5.50; 2 yrs., \$10.00; 3 yrs., \$14.50; single copy, 15 cents, more than six months old, 25 cents. No charge for foreign postage.

Change of address: Three weeks notice is required. When ordering a change please state exactly how magazine is now addressed. Your new address should include postal zone number if you have one.

Copyright © 1957 by Science Service, Inc., Republication of any portion of SCIENCE NEWS LETTER is strictly prohibited. Newspapers, magazines and other publications are invited to avail themselves of the numerous syndicated services issued by Science Service. Science Service also publishes CHEMISTRY (monthly) and THINGS of Science (monthly).

Printed in U. S. A. Entered as second class matter at the post office at Washington, D. C., under the act of March 3, 1879. Acceptance for mailing at the special rate of postage provided for by Sec. 34.40, P. L. and R., 1948 Edition, paragraph (d) (act of February 28, 1925; 39 U. S. Code 283) authorized February 28, 1950. Established in mimeograph form March 13, 1922. Title registered as trademark, U. S. and Canadian Patent Offices. Indexed in Reader's Guide to Periodical Literature, Abridged Guide, and the Engineering Index.

Member Audit Bureau of Circulation, Advertising Representatives: Howland and Howland, Inc., 1 E. 54th St., New York 22, Eldorado 5-5666, and 435 N. Michigan Ave., Chicago 11, Superior 7-6048.

### SCIENCE SERVICE

The Institution for the Popularization of Science organized 1921 as a non-profit corporation.

Board of Trustees — Nominated by the American Association for the Advancement of Science: Paul B. Sears, Yale University; Karl Lark-Horovitz, Purdue University; William W. Rubey, U. S. Geological Survey. Nominated by the National Academy of Sciences: Harlow Shapley, Harvard College Observatory; George W. Corner, Rockefeller Institute for Medical Research; Edward U. Condon, Washington University. Nominated by the National Research Council: Leonard Carmichael, Smithsonian Institution; Jerome Hunsaker, Massachusetts Institute of Technology; I. I. Rabi, Columbia University. Nominated by the Journalistic Profession: Michael A. Gorman, Flint Journal; Neil H. Swanson, Garrison, Md.; O. W. Riegel, Washington and Lee University. Nominated by the Scripps Estate: John T. O'Rourke, Washington Daily News; Charles E. Scripps, Cincinnati, Ohio; Edward J. Meeman, Memphis Press-Scimitar.

Officers — President: Leonard Carmichael; Vice President and Chairman of Executive Committee: Charles E. Scripps; Treasurer: O. W. Riegel; Secretary: Watson Davis.

Staff — Director: Watson Davis. Writers: Marjorie Van de Water, Ann Ewing, Howard Simons, Dorothy Schriver, Helen M. Davis, John W. Robinson. Science Clubs of America: Joseph H. Kraus, Margaret E. Patterson. Photography: Fremont Davis. Production: Priscilla Howe, Marcia Nelson. Interlingua Division in New York: Alexander Gode, 80 E. 11th St., GRamercy 3-5410.
