

SCIENTIA INTERNATIONAL

NOVAS DEL MENSE IN INTERLINGUA

Astronomia.—Le plus grande radiotelescopio, con un diametro de circa 27 m, es in le Pais Basse. Le germanos ha un con un diametro de circa 25 m. Illo gerite per le Universitate Harvard ha un diametro de circa 20 m. Le Laboratorio Recercatori Naval del Statos Unite erige un radiotelescopio a Maryland Point, Md., con un diametro de circa 28 m. Illo essera inaugurate in le curso del menses veniente. Le installations pro le personal es parcialmente duple proque le astronomos a Maryland Point va includer un astronoma. In Anglaterra on prepara le construction de un radiotelescopio con un diametro de plus que 80 m. Illo essera preste in 1958.

Technologia.—Un cellula de quarz, non plus grande que un arachide, promitte devenir un reemplacimento de efficacia superior pro le diaphragmas nunc in uso in radios e grammonophons. Un currente de alte voltage ionisa le aere in le cellula, rendente lo simile al ionosphera que enveloppa le terra a un altitude de 400 km. Variaciones del currente causa expansiones e contracciones del "nube" ionisata que se manifesta in modulabilissime undas acustic. Le nove altiparlator es le creation del Corporation DuKane de St. Charles in Illinois.

Recercas de Cancere.—Duo leucemoide typos de cancere in muses, ambes usque nunc irrelentabile per irradiation o chimotherapya e ergo semper letal, ha essite completamente curate intra 30 dies per le injection intraperitoneal de sero ab normal porcos de India. Seros ab altere animales ha nulle effecto super le canceres mentionate, e nulle effecto es exercite per sero ab porcos de India super altere typos de cancere. Ancora plus mysteriose es le facto que le effecto in question non se monstra in vitro. Il pare que le factor active in le sero require le presentia de un altere factor que existe in le muses. Le clarification de iste enigma va representar un importante passo in avante in le biochimia cancerose. Le recercas hic reportate esseva execute al Hospital New York.

Computatores.—Le firma Arthur D. Little de Boston construe un computator electronic sin tubos a vacuo e sin transistores, resultante in un enorme economia de dimensiones. Le projecto es possibile gratis al invention del "cryotron" per Dr. D. A. Buck del Instituto Technologic de Massachusetts. Le cryotron es un rumpc-currente que utilisa le principio que multe metallos perde quasi omne resistencia al currente electric quando illos es exponite a temperaturas in le vicinitate de zero absolute e que illos reacquire lor resistencia normal in despecto del basse temperatura quando illos suffre le effecto de un campo magnetic. Assi le cryotron es simplemente un curte pecia de filo metallic circumdate per un altere conductor de forma spiral. Le filo al centro es un conductor quando il ha nulle currente in le spiral circumdate lo. Le filo deveni un resistor quando un currente passa per le spiral.

Inventiones.—Un matras que se face molle o dur secundo le gusto del usator esseva inventate per senior F. D. Arpin de Orange, N. J. Le matras ha un copertura hermetic intra le qual un vacuo pote esser producite per medio de un pumpa special. Alora le matras es dur. Per aperir un valvula on reduce le vacuo e rende le matras plus molle.

Physica Atomic.—Importante disveloppamentos occurre presentemente in le utilisation de energia atomic como propulsor naval. Le

Statos Unite possede jam duo submarinos atomic. Dece-tres alteres es planate. Le Marina Statounites etiam ha planos pro un porta-aviones atomic de 85.000 tonnas. Multiple projectos de naves mercantil a propulsion atomic es sub consideration. Japon ha planos pro un petroleo submarin atomic de 30,000 tonnas. Russia ha sub construction un rumpe-glacie atomic de un displaciamento de 16,000 tonnas. Le Marina Royal Britannic ha compleatate le planos pro su prime submarino atomic. Inter le prospects futur del navigation atomic on mentiona naves de pesca que es simultaneamente fabricas flottante; naves de exploration petroleo-geologic que es flottante turres de foration; e naves amphibie sur- e submarin que pote immerger se pro evitar le inclemencias del tempore.

Osteologia.—Un gruppo de scientistas de duo universitates in Colorado ha inaugurate un studio systematic del crescentia e recrescentia annual del cornos de cervos. In iste phenomeno il se tracta de un processo regeneratori de ossos que es unic in su intensitate. Si illo depende de un specific factor biochimic, on pote pensar al possibilitate de inducer, per medios chimic, processos analogemente regenerative in ossos fracturare in patients human.

Antibioticos.—Studies in progresso al Instituto Recercatori Walter Reed del Armea Statounites a Washington supporta le theoria que antibioticos inhibi le crescentia de bacterios per obstruer le disveloppamento de lor pariete exterior. Isto pare esser le sol conclusion que pote esser deriveate ab le observation que (1) antibioticos se concentra in le pariete exterior del bacterios que illos attaca e (2) materiales normalmente usate in le disveloppamento del pariete exterior del bacterios se concentra inusata e apparentemente inusabile a lor interior post que illos es attaccate per antibioticos. On suppose que le construction del pariete require non solmente le mentionate materiales sed etiam le action de un enzyma que es destruite per le antibioticos. Le proxime problema es evidentemente le identification del enzyma (providite que illo existe). Su isolation e subsequente analyse aperira le possibilitate de synthetizar in le laboratorio substantias chimic que pote inhibir le enzyma ancora plus efficacemente que le antibioticos e sin ulle effecto toxic super le organismo human.

Agricultura.—Experimentos execute at University Pennsylvania ha demonstrate que apes pote esser fortiate a abandonar omne activitate per exponer los a sonos de un frequentia de 600 cylos per secunda e un fortia de circa 120 decibels. Le discoperta es de evidente importancia practic pro le apicultor. Nunc ille pote inspicer su apicularios sin proteger se contra su amicas mellifere per enveloppar se (e illas) in nubes de fumo de tabaco que postea debe esser eliminate per le plus meticulose ventilation. Le sonos producite per un simple vibrator es tanto efficace como le fumo traditional—e multo plus nitide.

Technologia.—Fornos solar non es de vital importancia practic in le Statos Unite. Le pais es ancora troppo ric in altere ressources de energia thermic. Nonobstante, in le recercas del physica de alte temperaturas on se servi de plus in plus de fornos solar que produce un calor idealmente "pur," i.e. libere de omne production lateral de gases apte a complicar le labor del experimentator.

Science News Letter, February 23, 1957

GENERAL SCIENCE Reading Interlingua

► YOU CAN READ Interlingua if you had no more than one semester of high school French or Spanish or Latin and flunked it. You can read and understand a great deal of it even if you never had contact with any foreign language.

Send this page to an acquaintance abroad and tell him that he can get additional information about Interlingua from Alexander Gode, SCIENCE SERVICE's Interlingua Division, 80 E. 11th St., New York 3, N. Y. Science News Letter, February 23, 1957

SCIENCE NEWS LETTER

VOL. 71 FEBRUARY 23, 1957 NO. 8

The Weekly Summary of Current Science, published every Saturday by SCIENCE SERVICE, Inc., 1719 N St., N.W., Washington 6, D. C., NORTH 7-2255. Edited by WATSON DAVIS.

Subscription rates: 1 yr., \$5.50; 2 yrs., \$10.00; 3 yrs., \$14.50; single copy, 15 cents, more than six months old, 25 cents. No charge for foreign postage.

Change of address: Three weeks notice is required. When ordering a change please state exactly how magazine is now addressed. Your new address should include postal zone number if you have one.

Copyright © 1957 by Science Service, Inc. Reproduction of any portion of SCIENCE NEWS LETTER is strictly prohibited. Newspapers, magazines and other publications are invited to avail themselves of the numerous syndicated services issued by Science Service. Science Service also publishes CHEMISTRY (monthly) and THINGS (monthly).

Printed in U. S. A. Entered as second class matter at the post office at Washington, D. C., under the act of March 3, 1879. Acceptance for mailing at the special rate of postage provided for by Sec. 34.40, P. L. and R., 1948 Edition, paragraph (d) (act of February 28, 1925; 39 U. S. Code 283) authorized February 28, 1950. Established in mimeograph form March 13, 1922. Title registered as trademark, U. S. and Canadian Patent Offices. Indexed in Reader's Guide to Periodical Literature, Abridged Guide, and the Engineering Index.

Member Audit Bureau of Circulation, Advertising Representatives: Howland and Howland, Inc., 1 E. 54th St., New York 22, Eldorado 5-5666, and 435 N. Michigan Ave., Chicago 11, Superior 7-6048.

SCIENCE SERVICE

The Institution for the Popularization of Science organized 1921 as a non-profit corporation.

Board of Trustees — Nominated by the American Association for the Advancement of Science: Paul B. Sears, Yale University; Karl Lark-Horovitz, Purdue University; William W. Rubey, U. S. Geological Survey. Nominated by the National Academy of Sciences: Harlow Shapley, Harvard College Observatory; George W. Corner, Rockefeller Institute for Medical Research; Edward U. Condon, Washington University. Nominated by the National Research Council: Leonard Carmichael, Smithsonian Institution; Jerome Hunsaker, Massachusetts Institute of Technology; I. I. Rabi, Columbia University. Nominated by the Journalistic Profession: Michael A. Gorman, Flint Journal; Neil H. Swanson, Garrison, Md.; O. W. Riegel, Washington and Lee University. Nominated by the Scripps Estate: John T. O'Rourke, Washington Daily News; Charles E. Scripps, Cincinnati, Ohio; Edward J. Meeman, Memphis Press-Scimitar.

Officers — President: Leonard Carmichael; Vice President and Chairman of Executive Committee: Charles E. Scripps; Treasurer: O. W. Riegel; Secretary: Watson Davis.

Staff — Director: Watson Davis. Writers: Marjorie Van de Water, Ann Ewing, Howard Simons, Dorothy Schriver, John W. Robinson. Science Clubs of America: Joseph H. Kraus, Margaret E. Patterson. Photography: Fremont Davis. Production: Priscilla Howe, Marcia Nelson. Interlingua Division in New York: Alexander Gode, 80 E. 11th St., Gramercy 3-5410.
