## NOVAS DEL MENSE IN INTERLINGUA

**► Statistica de Population.**—Depost 1950, le population del Statos Unite ha crescita per 24.500.000 capites. In 1958 le augmento esseva 2.860.000. Le total es hodie 175.600.000. Assi le population statounitese cresce per un factor de 1,7 pro cento per anno.

**► Recercas de Cancere.**—Dr. R. McMurdy, medico de sanitate public in le contato de Norfolk in Anglaterra, opina que le governamentos del mundo hesita de acceptar le conclusiones confirmative de 19 extense investigations international del question de si o non il existe un relation causal inter le habitude del fumar e le incidentia de cancer pulmonar, exclusivamente a causa del revenitos financiar qu es producite per le taxas de tabaco. Attribuer le correlation positive inter le consumption de tabaco e le occurrentia de cancer pulmonar a simplemente un coincidentia es—segundo Dr. McMurdy—exactemente como si on insisteva que le association inter le morte de un individuo e le facto que ille ha bebito acido prussic es plus tosto un association de coincidentia que un association de causa e effecto. Dr. McMurdy signala que le taxas de tabaco in Anglaterra amonta annualmente a vinti milliards dollars (plus que le costo total del famose servicio de sanitate public in ille pais). Dr. McMurdy etiam signala que solmente tres epidemias in le historia del humanitate—le epidemias de peste in 1348 e 1665 e le epidemia de influenza in 1918—ha causate (temporarimente) un mortalitate plus grande que le mortalitate causate (permanemente) per cancer pulmonar.

**► Technica Medical.**—Chirurgos del Universitate Melbourne experimenta con un camera de television que es satis micre pro esser ingluitate per un paciente. Le prisas del camera pote esser projicite con un magnification de 30 a 40 vices le dimensiones del tubo de imagine. Certe elementos del apparatura es importate ab Germania. On se promitte ab illo grande avantageos in le diagnose de cancer e de altere morbos interne. Le Consilio Australian pro le Lucta Contra le Cancere ha pro 1959 un budget de subventiones amountante a un total de \$225.000. Plus que un tertio de iste total—\$80.000—va esser usate pro perfectionar le camera de television intracavitari.

**► Scientia General.**—Annualmente le "Cerca de Talentos Scientific" del Fundation Educational Westinghouse (conducite per "Clubs de Scientia in America," un del activitates de "Science Service") resulta in le congregation in Washington de 40 promittente scholares de schola secundari, qui es le finalistas in le competition pro stipendios de un valor total de \$34.250. Iste 40 finalistas es seligite ex 400 semi-finalistas, le quales—de lor parte—es le crema de un massa de plure milles scholares initialmente participant in le concurso. A parte le examines requisite, un satis extense documentation de recerca individual debe esser submittite per omne concurrente. Multes inter le labores submittite per iste adolescentes de inter 15 e 17 annos de etate e de ambe sexos reflecte un astonante maturitate non solmente technic e scientific sed etiam critic e mesmo philosophic. In 1959, un del finalistas in lo que es le "Dece-Octave Cerca Annual de Talentos Scientific"—Joseph P. Vajk de Princeton Junction in New Jersey—ha redigite un articulo critic in que ille presenta le theses que in le historia del vita terrestre, periodos de evolution accelerate esseva le resultado de augmentos de radioactivitate directemente responsabile pro le occurrentia de plus numerose e plus marcate mutationes. Vajk crede que le efecto del augmento de radioactivitate in nostre ambiente va resultar in le

evolution de un specie de super-homine nietzschean, e ille signala que le precio a pagar pro un tal progresso va esser le production (e subsequentemente le destruction) de innumerabile mutationes (human e animal) de viabilitate inferior. Vajk comprende que omne isto pone un problema ethic de grande seriositate, sed ille es satis modeste—de novo un signo de maturitate—pro non voler occupar se de ille problema al tempore presente.

**► Aeronautica.**—Al aerodromo London, aves—e specificamente laros—constitue un ver plaga: Illos se captiva in le propellers o es sucite a in le motores a reaction. Iste secunde possibilitate es particularmente pericolose, e infelizmente le aves prefere aviones a reaction proque illos has discoperite que istos emana un confortable calor.

**► Agricultura.**—Promittente successos es reportate ab California in le "guerra bacteriologic" contra insectos de nocivitate agricole. On labora con *Bacillus thuringiensis*, que es non solmente efficacissime contra le insectos, que illo affice, illo etiam pare esser multo specific, i.e. illo destrue varie insectos de character nocive e affice non del toto alteres que es utile. Illo pare que le infection per *B. thuringiensis* resulta in le formation de un toxina crystallin in le organos gastric del insectos e que iste toxina es le causa immediate del morte del insectos. On va tentar le synthese laboratorial del toxina, proque illo representarea un insecticida vermente ideal. Usque nunc nulle desenvolopamento de resistentia contra illo ha essite notate in ulle del insectos studiate. Le uso de *B. thuringiensis* como insecticida ha essite sanctionate per le autoritates, sed illo non essera disponibile commercialmente ante le anno 1960.

**► Astronautica.**—Le ballonistas del marina statounitese que ascendeva in un ballon de recerca in plen lumine diurne a un altor de plus que 25 kilometros ha reportate que illac le celo in supra de illes esseva completamente nigre e que nulle corpore celsente esseva visible in illo. On ha calculate que a un altor de alicun kilometros de plus, plure planetas e astros devenera discernibile pro quicunque sape ubi illos es situate. A un altor de 100 km, le celo—mesmo a mediedie—esserea perseminate de astros, plus clar- e bellemente que le plus clar e belle celo nocturne unquam vidite ab le superficie del terra.

**► Genetica.**—Duo recercatores al britannic Collegio Veterinari Regal ha studiate le phemoneno del preferentias de gusto in vitellos. Per usar in lor studios vitellos que esseva geminos identic, le recercatores ha trovate que preferentias de gusto individual es—al minus in vitellos—un phemoneno hereditari que es quasi completamente independente de influencias del ambiente. Un tracto commun de omne le vitellos esseva que illos prefereva le gusto dulce de glucosa a gustos salin, acide, o amar. Sed—e isto es ancora plus interessante—omne le vitellos rejeicava omne gustos de alte intensitate, mesmo le gusto dulce de glucosa.

**► Glaciologia.**—Bullas de aere includite in le glacia arctic e antarctic in stratos de varie estates va esser analysate con respecto a lor contento de radioactivitate, con le objectivo de determinar si le radioactivitate del atmosphera terreste ha essite augmentata per nostre experimentos con explosiones atomic.

**► Geophysica.**—Le studio del orbita de Vanguard I demonstra que le terra ha le forma de un pira.

### GENERAL SCIENCE

## Reading Interlingua

► YOU CAN READ Interlingua if you had no more than one semester of high school French or Spanish or Latin and flunked it. You can read and understand a great deal of it even if you had never had contact with any foreign language.

Send this page to an acquaintance abroad and tell him that he can get additional information about Interlingua from Alexander Gode, SCIENCE SERVICE's Interlingua Division, 80 E. 11th St., New York 3, N. Y.

Financial contributions to the Interlingua program are needed.

### SCIENCE NEWS LETTER

VOL. 75 FEBRUARY 28, 1959 NO. 9

Edited by WATSON DAVIS

The Weekly Summary of Current Science, published every Saturday by SCIENCE SERVICE, Inc., 1719 N St., N.W., Washington 6, D.C., North 7-2255. Cable Address: SCIENSERV.

Subscription rates: 1 yr., \$5.50; 2 yrs., \$10.00; 3 yrs., \$14.50; ten or more copies in one package to one address, 7½ cents per copy per week; single copy, 15 cents; more than six months old, 25 cents. No charge for foreign postage.

Change of address: Three weeks notice is required. When ordering a change please state exactly how magazine is now addressed. Your new address should include postal zone number if you have one.

Copyright © 1959 by Science Service, Inc. Reproduction of any portion of SCIENCE NEWS LETTER is strictly prohibited. Newspapers, magazines and other publications are invited to avail themselves of the numerous syndicated services issued by Science Service. Science Service also publishes CHEMISTRY (eight times a year) and THINGS of Science (monthly).

Printed in U.S.A. Second class postage paid at Washington, D. C. Established in mimeograph form March 13, 1922. Title registered as trademark, U. S. and Canadian Patent Offices. Indexed in Reader's Guide to Periodical Literature, Abridged Guide, and the Engineering Index. Member Audit Bureau of Circulation.

### SCIENCE SERVICE

The Institution for the Popularization of Science organized 1921 as a non-profit corporation.

Board of Trustees—Nominated by the American Association for the Advancement of Science: William W. Rubey, U. S. Geological Survey; Wallace R. Brode, National Bureau of Standards; Douglas Whitaker, Rockefeller Institute for Medical Research. Nominated by the National Academy of Sciences: Edward U. Condon, Washington University; Harlow Shapley, Harvard College Observatory; Philip Bard, Johns Hopkins University. Nominated by the National Research Council: I. I. Rabi, Columbia University; Leonard Carmichael, Smithsonian Institution; John R. Dunning, Columbia University. Nominated by the Journalistic Profession: O. W. Riegel, Washington and Lee University; Lee Hills, Detroit Free Press. Nominated by the Scripps Estate: Edward J. Meeman, Memphis Press-Scripps; Frank Ford, Washington, D. C.; Charles E. Scripps, Cincinnati, Ohio.

Officers—President: Leonard Carmichael; Vice President and Chairman of Executive Committee: Charles E. Scripps; Treasurer: Wallace R. Brode; Secretary: Watson Davis.

Staff—Director: Watson Davis. Writers: Helen Buechl, Ann Ewing, Richard Littell, Allen Long, Elisabeth Mitchell, Jane Marye, Ralph Segman, Benita Tall, Marjorie Van de Water, Howard Simons (on Nieman Fellowship Leave). Science Youth Division: Joseph H. Kraus, Dorothy Schriver, Shirley Moore. Photography: Fremont Davis. Production: Priscilla Howe, Marcia Nelson. Syndicate Sales: Hallie Jenkins, Interlingua Division in New York; Alexander Gode, 80 E. 11th St., Gramercy 3-5410. Advertising Manager: Fred A. Moulton, Metropolitan 8-2562.
