A COMPLETE MECHANICAL EQUIPMENT OF AN ELECTRONIC BRAIN

MEMORIZES • MULTIPLIES • STORES FACTS

DIGI-COMP I is a working digital computer designed to demonstrate the operations hidden within the circuits of an electronic brain. It is capable of adding, subtracting and multiplying. It also shifts, complements, carries, memorizes, counts, compares and sequences. It can solve problems of missile countdown, satellite re-entry, missile checkout and more practical subjects such as bank accounts and solving logical riddles.

DIGI-COMP can even be trained for fun such as fortune telling, etc. Ingeniously designed in plastic, this mechanical analog of a binary counter is 12" x 3 1/2" x 4", and is open so its fascinating operation can be viewed. In kit form, it can be assembled in less than one hour and is complete with all parts, assembly chart, and full 28-page operations manual which shows how to check the unit out, program problems, solve riddles and try experiments. A fascinating device and a wonderful education project for school children.
