

Explore the infinite wonders of the world's oceans for 10 days as a guest of the **LIFE** Nature Library

Now you and your family may share the oceanographer's view of the sea's history, underwater landscapes, tides, fantastic creatures, potential usefulness.

Since time immemorial, the sea has woven a spell over man. Yet until recently it has been almost a total mystery. What you learned in school about it is scarcely more than Columbus knew nearly 500 years ago.

Only in the last two decades have we begun unlocking the sea's secrets with electronic sounding, listening, and recording devices... advanced diving and breathing equipment... underwater cameras and lights... giant "vacuum cleaners" that sweep up the floor of the sea... amazing "corers" that carve out sections of the ocean bottom and haul them up... powerful drills that pierce the very crust of the earth, miles below sea level.

Now, from this rapidly accumulating treasury of scientific knowledge—so new it has never before been assembled in any single volume—LIFE brings you THE SEA, as your introduction to the LIFE Nature Library.

To bring you this book, LIFE mobilized skilled teams of writers, photographers, artists and researchers. They have produced a virtual encyclopedia of the sea. It is so accurate and clearly written it has been adopted for use in thousands of classrooms from grade school to college. So fascinating that, of 750,000 American families who asked merely to look at THE SEA, more than 720,000 decided to keep it.

Through its 192 glittering photographs, paintings, maps, drawings, and charts,

and 35,000 words of text, you join in great scientific adventures of our time.

You board the bathyscaph *Trieste* and plunge into the blackness of the deepest-known trench, seven miles below sea level. You join in mapping the longest known mountain range in the world—40,000 miles, and entirely under water. You catch a giant fish thought to be extinct for 50 million years. You examine the larva of an eel-like creature whose adult form no human has yet seen, but which may be 90 feet long. You take part in an exciting hunt for clues to the origins of life itself—in the sediment that blankets the ocean bottom. (In some places it is 2½ miles thick and may have lain undisturbed for billions of years.)

Obviously so vast and exciting a book cannot be adequately described here. So we invite you to borrow a copy from us for 10 days. Then if you wish you may return it and owe nothing. Or you may own it for much less than such an expensively printed and handsomely bound book would ordinarily cost. Thanks to TIME-LIFE'S vast facilities and large print orders, you pay only \$3.95 (plus shipping and handling). Then you will be entitled to receive another volume of the LIFE Nature Library for free examination every 2 months. But you make no commitments, promise to buy nothing. And you may cancel this arrangement any time you wish. To examine the first volume, simply mail order form at right.

Some of the other volumes in the **LIFE** Nature Library:

TO: TIME-LIFE BOOKS, Dept. 8127-XXXVII
TIME & LIFE BUILDING
CHICAGO, ILLINOIS 60611

Please enroll me as a subscriber to the LIFE NATURE LIBRARY and send me Volume I (THE SEA) for a 10-day Trial Examination. If, at the end of that time, I decide not to continue the series, I will return the book, canceling my subscription. If I keep the book, I will pay \$3.95 (plus shipping and handling). I understand that future volumes will be issued on approval at two-month intervals, at the same price of \$3.95. The 10-day Free Examination privilege applies to all volumes in the LIBRARY, and I may cancel my subscription at any time.
