A Science News reporter has two points of view.

Science News reporters are both scientific specialists . . . and experienced, exacting journalists.

From coast to coast and around the world they seek out up-to-the-minute, hard-fact news of current scientific happenings . . . and send it back to our Washington-based staff for expert editing. Our perceptive professionals contribute realistic evaluations and interpretations of occurrences in virtually every scientific and technical field . . . in-depth stories that provide the perspective . . . features and columns that emphasize what's new and significant in research, development, exploration and discovery. In addition, they supply us with pertinent photographs, diagrams, drawings, maps and other illustrative material.

You enjoy their two points of view.

Why not send a gift subscription to somebody else who will enjoy Science News as much as you do?
