Why do so many books chosen for you by The Library of Science turn out to be prize winners?

Because our editors spare no effort to search out the very best new books in all scientific disciplines and the interesting by-paths to which they lead. Generally, these are submitted to us in manuscript form; out of a hundred books submitted, we may choose only one. If a book later wins a prize, or some special citation, it is merely confirmation of good judgment and discerning choice.

A surprisingly large number of selections have been so honored. It's all very flattering, but we feel that *you* are the real prize winner. You get the best of the new books, on publication, at savings up to 30% (and not infrequently, more). And for every four books you buy, you earn a free bonus book (which might be a prize winner, too). Add this money-saving offer—and can you think of a good reason for not joining now?
