Science Clubs of America

WHY A SCIENCE CLUB?

A science club, with one or more adult supervisors, stimulates extra-curricular activities (*many of which can be originated and organized by students themselves*). These include individual and group research projects, field trips, seminars with scientists, communications (*papers at meetings, exhibits*), and entry into science competitions.

Your science club can:

- Bring together groups of students with common interests in science.
- Encourage the student's curiosity and help to channel it into independent scientific thinking, originality and practical view of the problems of investigation and research.
- Give a realistic glimpse of jobs and careers in science, and some understanding of the education and skills which science is seeking today.

HOW TO AFFILIATE

Send \$1.00, together with this coupon to Science Clubs of America. Sponsor must be a science teacher, parent, adult leader or professional scientist. If you do not have a club, you may wish to form one and affiliate, or you may simply wish to affiliate as an interested adult and receive our materials to keep informed on science youth activities. If your school has a science club, and you would like to have a charter certificate and SCA membership cards for all your members, a voluntary \$5 contribution (tax deductible) will bring these materials.

ACTIVITIES HANDBOOK

As an SCA affiliate, you will receive the valuable Activities Handbook, covering suggestions for high school and elementary level clubs, organizing and conducting science fairs, developing science projects, the National Science Talent Search, guidance for student research projects, scholarship information, career news, summer activities and much other useful information.

SCIENCE CLUBS OF AMERICA

Since 1941, this nation-wide organization has been an activity of Science Service, the unique, non-profit institution founded to take science to the people. SCA has provided materials and advice to help in the development of a broad spectrum of club activities . . . at high school level and, increasingly, in the elementary school.

SCA helps in the promotion of a lifelong interest in science by young people, whether they intend to become scientists or not. Working with your science club, SCA helps you expose young people to science as a career and to identify and recognize those gifted in science. Just as important, SCA believes, with educators, the non-science student will be a better citizen tomorrow if he is able to follow significant developments and to understand the effects of science on his daily life and career, business, industry, our economy and on the broad policies of his government.
