

**“They laughed
when I wound up
my Monaco
Shaver....”**

That's likely to happen to you when you first use the MONACO in front of anyone. A wind-up shaver may seem a plaything. Or at best an emergency type of shaver (because it needs no cords or batteries). After all, how can a hand-cranked shaver rotate fast enough to do a clean and close job? And how many times do you have to wind the darn thing to finish one shave?

One answer at a time: The three-blade shaving head revolves at such a fast clip that it actually gives you seventy-two thousand cutting strokes a minute! Compare that to your \$30 TurboDeluxe. Now, about the winding. The palm-shaped body of the MONACO (named for its birthplace, Monte Carlo) is filled with a huge mainspring made of the same Swedish super steel used in the most expensive watch movements. You crank the key just like a movie camera (about six turns) and the MONACO shaves and shaves and shaves. From ear to ear; from nose to neck, without slowing down. Maintains its full shaving speed right to the end—and long enough to do the complete job. Hard to believe, but really true.

A few more details: The surgical steel blades are so designed that they are continuously self-sharpening. You will find that the more you use the MONACO the sharper and the better it gets. The guard is so unbelievably thin (5/100 of a millimeter) that pressure is unnecessary. You just touch the shaver on your face and gently guide it in circular motions.

We could go on. But we don't expect to sell you with words. We just want to get you open-minded enough to tie up \$20 for two weeks. We'll give you that long to put the MONACO to the test. If it disappoints you (if you want to return it for any reason), send it back. Your money will be in the return mail. Obviously, we have reason to believe that this won't happen and that you will want to keep your MONACO for the office, club, cabin or in a permanent place in your bathroom cabinet. It's that kind of a thing. Once you've tried it you won't let it go.

P.S. You not only save the cost of an electric motor, but you save the cost of repairing it. The money that it leaves in your pocket; the dependability; the good, fast, clean shaves that you'll get—they'll give you the last laugh.

Please send me the following: SN0117
 MONACO SHAVER—STANDARD MODEL \$19.95
 MONACO SHAVER—MODEL ANATOMIQUE shaver housed in transparent case \$21.95
 SPECIAL TRIMMING HEAD (optional) \$ 4.95
 EXTRA REGULAR SHAVING HEAD (spare) \$ 3.95
 My check, plus \$1 for post. & ins. enclosed. Calif. resid's add 5% tax. Parts & workmanship guaranteed 1 year. Return in 2 weeks if not delighted.

films OF THE WEEK

Listing is for readers' information of new 16mm and 8mm films on science, engineering, medicine and agriculture for professional, student and general audiences. For further information on purchase, rental or free loan, write to distributor.

ALASKA. 16mm, color, sound, 26 min. The 49th state has become a thriving, bustling entity in the Union, with an eye to the future. Its population is filled with the rugged get-it-done spirit of the early pioneers. These pioneers, however, are not of the covered wagon variety. They use airplanes. Chilled by its proximity to the Arctic Circle and warmed by the Japanese Current, Alaska's great expanses remain to be discovered. Audience: general. Purchase \$285 from AV-ED Films, 7934 Santa Monica Blvd., Hollywood, Calif. 90046.

"I'M NOT TOO FAMOUS AT IT" (A DEFINITION OF LEARNING DISABILITIES). 16mm, b&w, sound, 28 min. Shows examples of motor inabilities, eye-hand coordination, temporal-spatial translation, and form-perception. Children with learning disabilities are individuals who sense the world outside of the normal structure, sometimes incompletely, sometimes unequally; more often than not, their I.Q.'s are not abnormal. They are not mentally retarded, yet they cannot survive in normal educational channels, nor can they achieve in later life the equivalent of their intelligence quotient. Audience: psychology, medical, educational, general adult. Purchase \$195 or rental \$15 from Contemporary Films/McGraw-Hill, 330 West 42nd St., New York, N.Y. 10036.

ELECTRON MICROSCOPY. 16mm, color, 23 min. Traces the progress of microscopy from the simple optical instruments of the 17th century to the electron microscope of the 20th. Audience: high school, college, adult. Purchase \$200 from International Film Bureau, 332 S. Michigan Ave., Chicago, Ill. 60604. (Produced by Associated Electrical Industries, England.)

UNDER STRESS. 16mm, b&w, sound, 27 min. A report on the reorganization of the mental health service in Australia. Audience: mental health officials, general adult. Purchase \$90 or rental \$4.50 from Australian News and Information Service, 636 Fifth Ave., New York, N.Y. 10020, or for western states, Press and Information Officer, Australian Consulate-General, Crocker Plaza, San Francisco, Calif. 94104.

to the editor

Ecology teach-in

Our faculty and student members in the Forestry School, as well as in other departments, will take a very active part in the environmental teach-in (SN: 12/20, p. 575). Several meetings have been held, and Representative Paul N. McClosky Jr. (R-Calif.) was lecturing to our student body in a series on "Issues in the Environmental Crises." As he is co-chairman with Senator Gaylord Nelson, (D-Wis.), we were able to obtain valuable insight into the philosophy of this teach-in.

The issues in the environmental crises have been well documented and it is up to the scientists now to come up with the solutions to these serious problems.

 Dean, School of Forestry
 Yale University, New Haven, Conn.*

Siderophiles

With reference to your recent article on Apollo 12 (SN: 12/20, p. 573), I think this served a useful purpose. I have not been able to obtain any clear idea of what the other people are thinking about the absence of siderophile elements. I believe the opinion of Dr. Ross Taylor's that you described represents a fairly wide system of thought.

Some of the papers by Dr. Paul W. Gast of Columbia University and Dr. A. E. Ringwood of the Australian National University at Canberra show a considerable amount of thinking along this line. There also is a paper by Drs. Karl K. Turekian and S. P. Clark of Yale that bears out Dr. Taylor's opinions.

I believe that story has brought the discussion out in a very useful way.
