# Now, for under \$70, Polaroid turns the sciences into snap courses.

It's done with the new Polaroid ED-10 Land Instrument Camera. It gives you instant classroom photomicroscopy. And it gives it to you at a price that puts it in a class by itself.

You get full-color pictures in a minute, black-and-white in seconds. And you get the same picture quality as with the most expensive instrument cameras (because they all use the microscope's optical system).

It fits any microscope, attaches in moments, and is easy to operate. You don't even have to know photography to use it. Just frame the subject in the scope; focus with the focusing tube; remove the tube and slip on the camera; and snap the picture. Seconds later, peel off a finished print.

The student gets what he sees. Without laborious sketching. (And he'll be developing more than a picture; he'll be developing an interest.)

It's a snap for the teacher, too. You can gain and hold attention better. Save classroom time. Demonstrate and make comparisons easier.

And you don't have to worry about that rough classroom handling. The ED-10 is molded of high-impact material to withstand it.

For more information, contact your scientific supply house or microscope dealer. Or write to: Polaroid Corporation, Industrial Marketing, Dept. 85-172, Cambridge, Mass. 02139.

Polaroid may help you ease the class struggle.
