Electrostatics is alive and exciting for \$129⁰⁰

Now your students can **measure**, not just observe, electrostatic phenomena. That student at the left is actually **measuring** the dielectric coefficient of an insulator. The reason he can make this measurement, and dozens more like it, is the solid state technology that PASCO scientific has designed into a new "electronic electroscopes."

PASCO's Model 224 Electrometer is more than quantitative, though. It has very high sensitivity. Indicates polarity directly (say goodbye to reference charges). Works whether the humidity is 10% or 90%. Amazing.

Cost? Only \$129. Add a complete set of PASCO accessories and electrostatics will come to life. For you **and** your students.

If you still think you can turn on today's inquiring kids with cat's fur and rubber rod, okay. But if you'll take some free advice, we'll send you, "A Better Way to Teach Electrostatics," a FREE 16-page brochure. Zero obligation; infinite insights.

The prime objectives of Apollo 13 are to land in the highlands of the moon and deploy scientific experiments. The landing site itself is shown in this composite from an earlier lunar orbiter. See page 353. (Photo: NASA)
