

Relevance in the Academy  
Why people have children

## THE BIRTH OF MOUNTAINS

## Science may change your life while you're reading this page!

*SCIENCE NEWS will tell you what science is doing . . .  
Why it's important to you . . . in about an hour a week*

New discoveries, new scientific theories about people and things, new uses for the products of science change your world . . . and the quality of your life . . . every hour of every day.

SCIENCE NEWS tunes you in on these key developments . . . lets you see how they relate to urgent problems . . . in about an hour's reading a week.

SCIENCE NEWS reporters — each one a specialist and an experienced journalist — report to you clearly, concisely, understandably. They provide more than the “gee whiz!” of science. From posts in most of the world's major centers of science news, they offer the background and perspective that help you interpret science in terms of its real significance.

*Every major field of science is covered and reported.*

SCIENCE NEWS was a pioneer in the recognition of the social and behavioral sciences as legitimate grist

for a science journalist's mill. And what other news organization has a specialist in the fields of ecology and environmental quality? In addition, you'll learn from us about quarks and quasars, polymers, particle accelerators and polywater (a discovery in search of an application). Equally important, SCIENCE NEWS reporters will cover “pot” and environmental pollution, building technology, cancer research and the weather — the impact of *all* science fields on the quality of your life and the shape of your world.

You'll like SCIENCE NEWS. You'll find it gives you a handle on what science is doing, and why it's important. That ought to be worth more to you than \$3.97, but that's all you need to pay for 39 concise, lively, weekly issues . . . our money-saving introductory offer.

**TUNE IN ON SCIENCE!

1719 N STREET, N.W., WASHINGTON, D.C. 20036

Accumulated evidence strongly indicates that the earth's mountain belts, such as the Rocky Mountains, are a consequence of the horizontal motions of the earth's surface described by the theory of plate tectonics. See page 143. (Photo: T. S. Lovering, U.S. Geological Survey)
