SUMMER PASTIME FOR ACTIVE CHILDREN

The how and why of science is always stimulating to the inquiring minds of children, and THINGS of science is just the "thing" to help satisfy this curiosity and search for knowledge. THINGS of science kits contain an explanatory booklet and simple materials for easy-to-do experiments that make science a "fun activity."

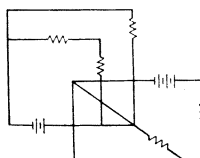

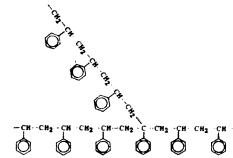

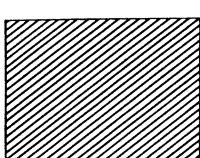

The kits are designed for young people from 10 to 16, but many parents buy them for interested younger children. They are ideal for an afternoon project, scout meet-

ings, neighborhood clubs and playground activities.

Illustrated on this page are THINGS of science kits, normally obtained on a subscription basis, now being offered as a summer special at \$1.00 each or three for \$2.50 while the supply lasts.

To obtain the units, please send your check or money order to:

"Caught" by artist Romaine Brooks perhaps
was intended to show the web of mystification
in human experience which, according to a new
group of psychological theorists and therapists,
is almost inextricably woven into life in modern
civilizations. See p. 335. (Reproductions of Ro-
maine Brooks' drawings are courtesy of the
National Collection of Fine Arts, Smithsonian
Institution. Originals: Black line on white paper.)
