

FILL THEIR EXTRA MINUTES WITH STIMULATING ACTIVITIES

in school . . . or at home

Need something to give those students who finish first? Need something to occupy them at home on a rainy day? Fill their time with activities that are stimulating . . . arouse their imagination . . . help them explore the WHY of the world around them. Give them THINGS of science, designed for young people 10 to 16— younger children can enjoy them too. THINGS of science kits contain an explanatory booklet and simple materials for easy-to-do experiments that make science a “fun activity.”

Glance around the clock and select the kits to fill their time with excitement and pleasure. Normally obtained on a subscription basis, units are now being offered at \$1.00 each or three for \$2.50 while the supply lasts. To obtain the units, please send your order and remittance to
