It's hard to categorize a man like Andy Wims. His official title at GM's Research Laboratories in Warren, Michigan, is Senior Research Chemist with supervisory responsibilities for Organic Analysis and Polymer Characterization.

That mouthful aside, Andy's a brilliant young scientist who's just designed a new device that will use lasers and computers to improve production techniques. He and his group are currently studying a more efficient

method of painting that will further reduce waste and in-plant paint spray pollution. What it means in practical terms is better production techniques for GM and better products for you.

Andy's also a talented musician with a solid academic background in music and several years' experience as a professional drummer. He can lay down the rock-steady rhythmic foundation to keep a large orchestra together. Or move up front in a small jazz group gig-

ging around the college scene.

Andy Wims, scientist or musician? Both. And more. An interesting man concerned with today's problems, involved with his community. One of thousands of GM men and women working very hard to help make life a little better for us all.
