

This incredible Space-Bird
is guaranteed to be

the most exciting kite you've ever flown

—or it won't cost you a penny!

- IT CLIMBS, ZOOMS, GLIDES, flutters its wings like a mammoth bird!
- NEW AERONAUTICAL DESIGN launches easily without running, without a tail!
- GIANT 4-FOOT WING SPREAD, 33" long, 3-dimensional, 7 mixed mod colors!

Fly it any time, in any weather, with just the slightest breeze. No need to run with it—just let it go! The Space-Bird soars, streaks, cavorts—flutters its wings continuously like a giant bird! Made of tear-proof acetate taffeta cloth—virtually indestructible. Three-dimensional; sports seven wild, way-out colors!

Try It—Fly It—For Guaranteed Thrills! Dozens of Space-Birds have won kite contests. One stopped a World Series game as it soared over the stadium. Another sailed over the 555-ft. Washington monument! Even the late President Kennedy enjoyed flying the Space-Bird. **And so will you!** We guarantee it!

You must experience the kite-flying thrills of your life—or simply return kite within **three weeks** for prompt refund.

Order No. 43060: Space-Bird Kite, 33" long, 4-foot wing spread. Complete with 250 ft. of line. Only \$4.95 plus 50c shipping and handling.

Order No. 43061: SUPER Space-Bird Kite, 47" long, huge 5½-foot wing spread. So powerful, it can nearly lift a small child off the ground. Complete with 500 ft. of heavy-duty line and reel. Only \$7.95 plus 75c shipping and handling.

Send check or money order. (New York State residents add appropriate sales tax.)

Combining fossil and nuclear

Your brief article "Fossil fuels vs. nuclear" (SN: 2/5/72, p. 90) was particularly interesting to me because of my work in this area, but it falls into the common error of ignoring an effectively combined cycle.

If and until the fast breeder or fusion reactor provides a better answer to our thermal pollution problems, there are no reasons other than prejudice and fear of innovation that prevent us topping conventional nuclear plants with fossil fuel superheaters.

A gas turbine-fossil fuel-nuclear cycle is equally feasible and would provide maximum efficiency with minimum thermal and (presently recognized) atmospheric pollutants.

Pollutants still unrecognized are another matter and may be the problem of another (human) generation.

TV as a release

As regards your article "TV and violence: 'A modest relationship'" (SN: 1/22/72, p. 55) I'd like to point out the fact that as recently as 20 years ago, Dr. Loretta Bender found that the children on the disturbed ward at Bellevue here in New York were much calmed and fortified by the cathartic value to be found in their "exposure" to comic-book and TV violence. I hope the finding that *some* few children are incited beyond control by these and allied stimuli will not stop our good legislators from looking at the *other* side of the coin—i.e. how many potentially violent kids obtain vicarious release by the same means? Ditto for nonaddictive drugs and tobacco (how many users do *not* develop the sequelae which investigators are looking for?).

Physics and society

There are, for the radical physicist who cares, more important problems facing his profession than engendering poetic visions of the sun ("Radical chic at the APS," SN: 2/12/72, p. 103). It is sadly true that physicists and engineers have provided society with the ultimate means of self destruction. The deadly use of science is not, I believe, sanctioned by either the APS or the AIP. From my experience as an engineer in a nuclear weapons laboratory I can heartily attest that some physics, in fact, is not good for you, however many ludicrous bumper stickers to the contrary. Much of the popular hostility toward science is simply a healthy social reaction to the hostility some scientists have shown toward life.
