for chemistry

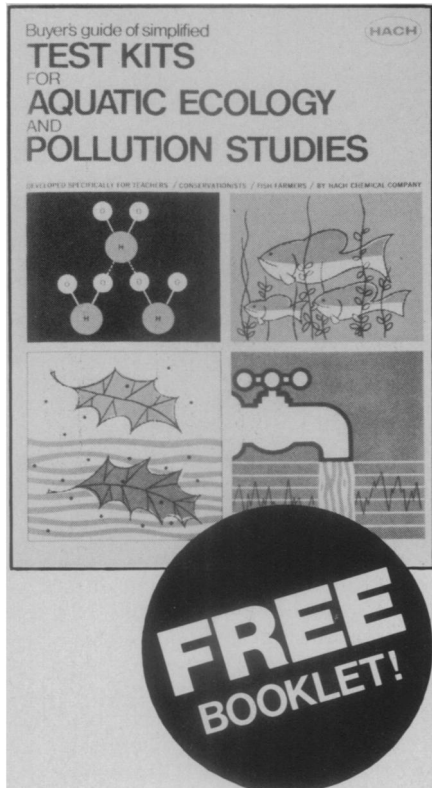

Leading chemistry teachers throughout the country find the spectrophotometer almost indispensable. Because it's the basic tool of today's chemists, familiarity with its operation is as important as a knowledge of wet chemistry. It makes good sense to include its use in every good chemistry-teaching program. In every field . . . medicine, industry, environmental control, education . . . students are most likely to encounter the versatile Spectronic® 20. Over 85,000 are in use in laboratories around the world. With a wide spectral range of 340-950nm, the Spectronic 20 can perform more teaching procedures than any other spectrophotometer in its class. The narrow 20nm bandpass gives resolution to professional standards. The easy-to-use, hard-to-hurt Spectronic 20 is available from only \$395.

We've got the software, too. Send for our free packet, "Why the Spectronic 20 Belongs in Your Chemistry Teaching Program." Included are a Spectrophotometer Educational Manual and a representative detailed teaching procedure. Write Analytical Systems Division, Bausch & Lomb, 128 Linden Avenue, Rochester, New York 14625.

THE TIME OF MAN

a film about survival

produced in cooperation with the American Museum of Natural History

How many classes will you show this important film to?

"The Time of Man" is so timely and so vital that you'll want to show it to several classes while you have it.

Its message: If man is to survive he must maintain the environment that sustains him.

Its method: Leading authorities present fascinating case studies of animal and human populations that have survived or perished according to their ability to adapt to their environment. Dr. Margaret Mead visits the Pacific Islanders. Dr. Roy Chapman Andrews discovers the first dinosaur eggs (in exciting 1923 footage). Dr. Harry Stevens discusses the evolution of populations. Dr. Colin Turnbull visits the Pygmies and Ik of Northern Uganda. Dr. Jane Goodall discusses chimpanzee behavior. Dr. Malcolm McKenna relates the stories of ants and dinosaurs. Dr. C. Lavell Smith talks about fish communities. And Richard Basehart superbly narrates.

It's a natural for science and social studies classes. Assemblies too. And adult education classes.

And it's prime programming for all groups—school, community or professional—that are concerned with man's environment. That covers quite a few, doesn't it? The opportunity to use the film several times on one booking makes it an extraordinary bargain.
