science news

SCIENCE NEWS' peripatetic staff of Washington-based science writers roams far and wide to bring our readers the most accurate, up-to-date, authoritative scientific news possible. From interviews at large university laboratories to visits to out-of-the-way ecological field sites, from multi-hotel meetings in major metropolises to single-subject symposiums in small college towns, our reporters go where the science news is. They are your witness to the world of science, whether it be a manned space shot or a biological specimen under new kind of electron microscope.

We figure that during the past 18 months, they have traveled more than 135,000 miles in their efforts to keep SCIENCE NEWS readers well informed.

When they're back in Washington, they find plenty to keep them busy there. Washington is the richest source of science news in the United States. There's a whole acronymic alphabet full of science-based agencies to report on and gather news from: NIH, AEC, NSF, OST, NAS, NRC, NAE, NOAA, DOT, NASA, USGS, NIMH, HEW, FDA, HUD, EPA, CEQ. To say nothing of the science committees of Congress and the science pronouncements of the White House, just six blocks from the office of SCIENCE NEWS.

When they have some time at their desks, SCIENCE NEWS reporters have rich lodes of research results at their fingertips. We regularly receive some 344 scientific journals from around the world plus myriad assorted publications—many fine science stories come from our examination of them.

Whenever there's a source to be consulted or fact to be checked, they never hesitate to reach for the long-distance telephone.

science news

The point is that we go out of our way to obtain the most authoritative and most timely science news possible. We think that's what you want . . . and deserve.
