

Excite your students about WATER ECOLOGY

Hach kits are so simple students can use them by themselves—and get accurate test results in just minutes. Simplicity and novelty make Hach test cubes ideal for school ecology projects, ecology clubs, field and stream surveys, testing drinking water, swimming pools, and more.

Each set includes a test tube/color comparator, enough reagent for at least 50 tests, and an instruction card. Different sets are available for testing ammonia nitrogen, copper, iron, chlorine, pH, phosphate, chromium and nitrate.

They're economically priced from \$6.50 to \$4.22 depending on quantities purchased. Write for more information today.

new products

Biofeedback is a new area of research and application. A system monitors multiple psycho-physiological functions. The different signals from the body are processed, then the information is fed back to the subject/patient. This allows the training of an entire psycho-physiological posture. Instruments detect and process individual physiological functions such as tension, brain waves, blood flow and GSR. The training kit is a small personal biofeedback instrument for individual home use. It comes with an extensive training manual and training record that teaches the student how to operate the instrument and use brain-wave training for personal growth.

Research information about current projects is a new, authoritative and invaluable 12-volume set of data. Contained is complete information about 125,000 ongoing research projects, the source of funds, approximate amount of funding, and the name, address and title of the researcher. Every category is covered: physical sciences, including engineering, chemistry, physics, earth and space, and electronics; life sciences, including medical, biological and agriculture; and social sciences, including, psychology, psychiatry, cultural anthropology, urban affairs, welfare, race and ethnic relations, and social services. These volumes are indispensable to researchers, writers, scholars, educators and scientists.

Biological safety cabinet is made of a new class 1 Fiberglas and provides full protection for the operator working with specimens inside the cabinet. It also features a powerful 1-hp motor and 115-volt variable-speed blower and filtering system. The cabinet is exhausted through a built-in replaceable HEPA filter that removes 99.97% of all particles .3 microns or larger before reaching the blower. Another feature is the cabinet's smooth one-piece covered corner interior for easy sterilization.

Cardiac simulator is a solid-state physiological waveform generator to simulate a normal 12-lead electrocardiograph. It is a useful device for undergraduate labs, nursing schools, biomedical technician programs and secondary school life-science curricula. It has testing capabilities for the check-out and trouble shooting of

cardiac care recording and monitoring equipment. The simulator can be used for demonstrating oscilloscopes, ECG recorders, and CCU monitoring equipment. The instrument features a variable rate—calibrated at 60 BPM; a range of 20—200 BPM; and is battery operated.

A handbook of particular interest to electronic technicians, engineers, scientists and instrument mechanics is *Tools for Electronic Assembly and Precision Mechanics*. Section headings include a very wide variety of tool kits, power tools, test equipment, microtools, knives, wrenches and metalworking tools. Special section includes engineer drafting supplies and electronic chemicals. An important feature of the catalog is the inclusion of four pages of technical data on tool selection; those pages include screwdriver selection, machine-screw data, plier facts, metal conductivity, and wire and insulation data.

Probing the Natural World represents an advance in student-oriented instruction. Based on student involvement, the PNW program allows students to talk and move around the classroom; to set up and perform laboratory activities almost every day; to work independently, each at his own speed; to share their knowledge with each other, to test themselves and to evaluate their own progress. The program also changes the teacher's role from lecturer and demonstrator to counselor and co-investigator. PNW students learn science the way scientists learn it: by inquiry, investigation and discovery.
