to the editor

'Ascent of Man'

Praises for your article and interview concerning Jacob Bronowski and his "The Ascent of Man" (SN: 12/8/73, p. 362). Magnificent.

Robert Nathan, in his Evening Song: Selected Poems, 1950-1973, Capra Press, conveys somewhat Bronowski's thought regarding man's being and needing "... the comfort of his own dignity. ..." Something not afforded by artists of malice.

Ross McFadyen Palm Desert, Calif.

It was not the quality of irrationality that made Hitler so harmful. (Actually, we can be thankful for that irrationality. Had he not made some very bad decisions, particularly military ones, he might have ended up in complete control of Europe.) Rather, what made Hitler harmful to the world was his selfrighteousness, the process by which he spawned and justified cruelty and excess. To put it in a word, he was arrogant.

J. Bronowski, at least if one judges him by the Frazier interview, thus appears to confuse morality with rationality. He goes on to confuse rationality with science. By such a devious route he arrives at the conclusion that man should take pride (of all things) in his ever-increasing meddling with, diddling and manipulation of "his" world, i.e. the environment. This conclusion is nothing less than arrogant. It merely substitutes "the master species" for "the master race!"

Warner Clements Beverly Hills, Calif.

I enjoyed reading your editorial comment on Jacob Bronowski and his BBC series, "The Ascent of Man," which rightly gives credit to the British mathematician and philosopher for making progress of the human race more understandable to the public.

But I differ sharply with the statements, "There's not an equivalent science figure in the United States. It's hard to think of any American scientist known so well to the public that he is stopped in the streets by those who have seen him on television."

Surely you know of Julius Sumner Miller, professor of physics at El Camino College, Calif., who for 40 years has explained the physical laws of the universe via classrooms, lecture platforms, radio and TV, motion pictures, books, newspaper columns, LP records and tapes. His lecture-demonstrations have enchanted lay as well as scientific audiences in the United States, Canada, Great Britain, France, Germany, Italy, Scandinavia, Kenya, South Africa, Australia and New Zealand.

> Andrew Hamilton University of California at Los Angeles Los Angeles, Calif.

Hocus-pocus experts

Noting the various letters on ESP in the Dec. 15 issue I believe P. M. deLaubenfels and Steven Okulewicz have a valid point. "It takes one to know one" and if Uri Geller is achieving his results by some sort of "hocus-pocus" what better way to find out than by having an expert in "hocuspocus" set up the experimental conditions?

If Geller can confound the professional magicians then we may have something worthy of further study. If not, then the psychophysicists must improve and tighten up their procedures. Either result would be better than leaving the question up in the air.

> F. L. Sulloway Fremont, Calif.

Skylab 2 crew doing well

I found your article on Skylab 2 (SN: 10/6/73, p. 214) to be accurately written and interesting. I wish the same could be said in every case about reporting in nonscience fields!

For your information, the medical progress of all Skylab 2 crewmen continued to be as encouraging as it was during the period for which your report was made. There were no relapses or other complications of any significance, and I look forward to reviewing the quantitative medical data and conclusions when they are avail-

Jack Lousma Major USMC NASA Astronaut Houston, Tex.
