

COSMIC CHROMA

Above,
diffuse nebula in
constellation
Carina. Below
left, the Great
Nebula in Orion.
Below right,
gaseous emission
nebula in
Serpens. All three
nebulas are be-
lieved to contain
areas where new
stars are forming.
(Photos: Kitt Peak
National
Observatory)

Left, color
density rendition
of solar eruption
on Aug. 9, 1973.
The thicker the
eruption the
darker the color.
Taken from orbit
during Skylab 3
mission by the
Naval Research
Laboratory's
extreme ultra-
violet spectro-
heliograph.
