

Globe trotting

SCIENCE NEWS' peripatetic Washington-based science writers roam far and wide to bring our readers the most accurate, up-to-date, authoritative scientific news possible. From interviews at large university laboratories to visits to out-of-the-way ecological field sites, from multi-hotel meetings in major metropolises to single-subject symposiums in small college towns, our reporters go where the science news is. They are your witness to the world of science, whether it be a historic flyby of a distant planet or a biological specimen under a new kind of electron microscope.

We figure that during the past 24 months, they have traveled the equivalent of nine trips around the world in their efforts to keep SCIENCE NEWS readers well informed.

When they're back in Washington, they find plenty to keep them busy there. Washington is the richest source of science news in the United States. There's a whole acronymic alphabet full of science-based agencies to re-

port on and gather news from: NIH, NSF, NAS, NRC, HEW, ERDA, NAE, NOAA, NASA, USGS, USDA, FDA, NBS, EPA, CEQ, FEA, OTA. To say nothing of the science committees of Congress and the science pronouncements of the White House, just six blocks from the office of SCIENCE NEWS.

When they have some time at their desks, SCIENCE NEWS reporters have rich lodes of research results at their fingertips. We regularly receive some 300 scientific journals from around the world.

Whenever there's a source to be consulted or fact to be checked, we never hesitate to reach for the long-distance telephone.
