**FERMILAB:
THE SYNCHROTRON
VISIBLE FROM
THE SKY**

The health hazards of NOT going nuclear

Sure, nuclear energy is dangerous.

**Any energy is dangerous.
But none is as safe as nuclear.**

Even in waste disposal? Even in terrorism and sabotage? And in major disasters?

Yes!

If you have been victimized by the "truth but not the whole truth" reporting by the mass media, you may find that hard to believe. But there is an easy way to find out: Order the book by Dr P. Beckmann, Professor of Electrical Engineering at the University of Colorado, Fellow of the IEEE, and editor of the monthly *Access to Energy*.

He has no personal stake in nuclear power, owns no stock of any nuclear or other corporation, is unconnected with the nuclear industry and electric utilities, and is not involved in any research project funded by any corporation or the federal government.

His book does not compare the risks of nuclear power to its benefits (how many dollars to a human life?).

It compares nuclear power to the other energy sources per unit generated energy, death for death, injury for injury, disease incidence for disease incidence, environmental impact for environmental impact.

The comparisons are fully documented.

**THE NUCLEAR CRITICS
HAVE NEVER DISPUTED
THESE COMPARISONS.**

**THEY HAVE MERELY
IGNORED THEM.**

The Health Hazards of NOT Going Nuclear, softbound \$5.95, hardbound \$10.95, is obtainable from The Golem Press, Box 1342, Boulder, CO 80306. Quantity discounts on request. No billing, please.

**When the nuclear critics scare
you with waste disposal, melt-
downs or terrorism, they never
ask the most important ques-
tion:**

COMPARED TO WHAT?

CAN YOU AFFORD NOT TO KNOW THE ANSWER?

Witty, highly informative, thoroughly documented, caustic... Demolishes the myths, distortions and outright falsehoods of the anti-nuclear crowd.

Nationally syndicated columnist John Lofton

Easily one of the most important books of our times...

Nationally syndicated columnist Ralph de Toledano

Technically informed, lively and polemical analysis...

SCIENCE NEWS

An instructive, entertaining book that deserves the widest possible audience.

NATIONAL REVIEW

Ralph Nader and his "Critical Mass" opponents of nuclear power plants have been blown out of the water... I challenge Nader to debate Beckmann across the country.

Nationally syndicated columnist John Chamberlain

This book is designed for laymen who can think... It could well start a trend back to public sanity.

REVIEW OF THE NEWS

Be sure to read the review on our back page today... As Dr Beckmann concludes, "When a group of anti-nuclear fanatics hold a meeting, they get more radioactivity from each other than they would from a nuclear reactor."

MANCHESTER UNION LEADER

A book of balanced judgements and technical insights, which is not only accessible to the average person, but is also fast-paced and witty.

PUBLIC FORUM (Portland, Ore.)

Lucidly puts the nuclear energy controversy in perspective... Beckmann's book is a volume that deserves your attention.

NEW HAMPSHIRE SUNDAY NEWS

One of the most extraordinary books to emerge from the nuclear debate so far.

AGE (Melbourne, Australia)

The extraordinary message of this extraordinary man in this extraordinary book is that "nuclear power is safer than any other form of large-scale energy conversion yet invented."

AMERICAN OPINION

Maybe... editors who have given space to the anti-nuclear insanities... will begin to ask themselves what has become of honest reporting. They might also ask themselves why the anti-nuclear activists behave as they do when, as Beckmann shows, their stated reasons for attacking nuclear power — such as their belief in a cleaner environment and safer working conditions — are so obviously wrong.

NEW SCIENTIST (London)

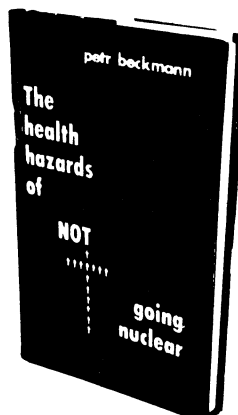

This delightful and highly informative work is important reading in this day of primitivism and anti-technological propaganda.

CHALCEDON REPORT (Vallecito, Calif.)

*Perhaps if I could put a copy of Dr Beckmann's book in the hands of every government official, every member of Congress and every opinion maker, there might be a return to reason. But what major newspaper, magazine, or TV network has... considered the points it makes with such overwhelming precision?**

Nationally syndicated columnist Ralph de Toledano

**After reading these lines, Mr. J.A. Moeller, of Scottsdale, Arizona, ordered a copy sent to each member of the US Congress.

**\$5.95 softbound
\$10.95 hardbound**

To: THE GOLEM PRESS
Box 1342, Boulder, CO 80302

Rush softbound, hard-
bound copies of *The Health Hazards of
Not Going Nuclear* to the address below. I
have enclosed a check for \$5.95 per soft-
bound, and \$10.95 per hardbound, copy.
(Sorry, no billing!)
