COVER: This perforated block was obtained from a solid cube after a succession of symmetric and systematic excisions. If surgery is continued, the volume of this Sierpinski sponge—so-named for its mathematician-innovator—will vanish, while the area lining its holes will accumulate unboundedly. This kind of paradoxical happenstance characterizes *fractals*, a fascinating class of objects that inhabit a kind of dimensional twilight zone. See p. 122. LETTERS

Male cycles keyed to mate's?

Alice J. Dan should have included some males who live alone as well as some males who live with other males in her study of male cycles (SN: 7/23/77, p. 58). This is particularly important in the light of Michael J. Russell's study indicating that olfactory signals tend to synchronize the cycles of women who live together (SN: 7/2/77, p. 5).

Since Dan's study group consisted entirely of men who live with women, olfactory signals from the women may have affected the men. So, her study can only suggest that *married* men may undergo monthly cycles.

In defense of Jensen

I assume you published Sadu Sadanand's diatribe (Letters, July 23) on the assumption that his antiscience jargon would expose itself for what it was. This was certainly successful, but there was an additional point raised that deserves mention.

Sadanand says that Arthur Jensen's theses are based exclusively on Cyril Burt's studies. This is an impression that the press, with its usual selective courageousness, has allowed to go unchallenged and unresearched. In fact, the best of many studies supporting heredity over environment was that of the Medicogenetical Institute of Moscow, which placed a thousand sets of identical twins into selected environments while in their infancy, a decade before the 1934 testing. The result was, as usual, wildly pro-heredity. Stalin—who would have loved Science for the People—promptly abolished the Institute. The Institute's director "confessed his ideological error and was shot." (Garrett Hardin, *Nature And Man's Fate*)

The example of the Medicogenetical Institute illustrates two points. First, there is much evidence besides Burt's to base Jensen's conclusions on, even if the flimsy attack on him were more substantial in content. Equally important, it demonstrates that the threat to free inquiry comes from the left rather than from the right. This is a fact that the scientific community seldom considers, even at the cost of leaving many of its most tragic martyrs unmourned.

*Robert W. Whitaker
Washington, D.C.*

While Sadu Sadanand's letter expresses his concern for the plight of blacks and other dis-

advantaged minorities in the United States today and his outrage at Arthur Jensen's research into the factors which determine IQ, it would be counterproductive to his cause and the scientific tradition for the AAAS to reconsider its nomination of Jensen as a fellow as he suggests. Nomination to the AAAS is based on legitimate and significant scientific research and not on the popularity of the theory or results. Correctness of the theory is not even that important a factor since scientific "proof" sometimes takes decades to achieve.

Lot of nothing

Whether product, power plant, President, or whatever, if you compare something with nothing, and consider *only* the possible future harmful effects, then nothing is going to win, hands down, nearly every time. However, nearly every time, the *proper* comparison is not with nothing, but with something else. In the case of saccharin (SN: 7/2/77, p. 13), the proper comparison would have been with other sweeteners. What happens to rats that are force fed massive amounts of honey, maple syrup or pure cane sugar?

Russian study

The claim that mean annual daily radiation values for the upper atmospheric boundary of the various planets had never been published prior to the work of J.S. Levine, D.R. Kraemer and W.R. Kuhn (SN: 6/11/77, p. 380) is not true. A study quite similar to theirs was published in a Russian journal in 1975 by the famous atmospheric scientist A.S. Morin: "Upper-boundary isolation of the Atmospheres of the Planets of the Solar System" *IZVESTIYA, ATMOSPHERIC AND OCEANIC PHYSICS II* (9:883, 1975). English translation published in 1976 by the American Geophysical Union and the American Meteorological Society. So it seems for once that the Russians have indeed beaten us to the punch, albeit a relatively insignificant one.

Loren Eiseley

Loren Eiseley, a poet of the mind, of history, of science, of conjecture, of symbolism. A gentle, perceptive poet.

Thank you for your kind eulogy (SN: 7/23/77, p. 63). I too trust he has found the great mystery he sensed. He will be missed.

*J.W. King
Abilene, Tex.*

SCIENCE SERVICE

Institution for the public understanding of science founded 1921; a nonprofit corporation.

Board of Trustees Nominated by the AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE: **Deborah P. Wolfe**, Queens College of City University of New York; **Bowen C. Dees**, The Franklin Institute; **Atheistan Spilhaus**, National Oceanic and Atmospheric Administration. Nominated by the NATIONAL ACADEMY OF SCIENCES: **Gerald F. Tape** (Vice President), Associated Universities; **Allen V. Astin**, Bethesda, Md.; **Glenn T. Seaborg** (President), University of California, Berkeley. Nominated by the NATIONAL RESEARCH COUNCIL: **Gerald Holton**, Harvard University; **Joseph W. Berg Jr.**, National Research Council; **Aaron Rosenthal**, Washington, D.C. Nominated by the JOURNALISTIC PROFESSION: **Edward Bliss Jr.**, Newburyport, Me.; **Julius Duscha**, Washington Journalism Center; **O.W. Riegel** (Secretary), Glasgow, Va. Nominated by E.W. SCRIPPS TRUST: **Milton Harris** (Treasurer), Washington, D.C.; **Edward W. Scripps II**, Edward W. Scripps Trust; **John Troan**, Pittsburgh Press.

Director: E.G. Sherburne Jr.; Assistant Director: Dorothy Schriver; Business Manager: Donald R. Harless; Things of Science: Ruby Yoshioka.
