Celestron®
C90 TELEPHOTO

C90 TELESCOPE

The photographer, astronomer, naturalist, educator, or casual observer — Celestron has established a new standard in superb telescopes and telephoto lenses at affordable prices (from $295). All feature large observatory mirror/lens type optics folded into a compact, lightweight, portable telescope or telephoto lens. Close-up detail borders on the fabulous from celestial objects light years away, to ships, planes, flowers, wildlife or people. Here is truly an instrument that allows you to observe or photograph the world around you. Celestron also has a full line of binoculars of astronomical quality.

Send $2.00 for 32-page full color catalog on how to select and use a Celestron telescope or telephoto lens.

Celestron International 2835 Columbia St., Box 3578-SN Torrance, Calif. 90053, U.S.A. Telephone: (213) 328-9560

Now! FULLY-ENGINEERED ELECTRIC CAR CONVERSIONS
Promise the 80's TOP-PERFORMANCE
EV's from cars of the 60's & 70's

Our EV CONVERSION GUIDEBOOK shows how your electric vehicle can outperform Olds' best demos at a fraction of their cost.

NASA-sponsored dyno and road tests prove our control system provides up to 21% more performance than today's inefficient EV's, Engineering simplicity and efficiency excel over expense (and energy-consuming) EV gadgetry. No Choppers! No Fredwheels! No LV transmissions! Use efficient controls you make from available surplus or our kits. Use efficient motors and batteries available today. Full data and sources provided.

GUIDEBOOK provides full tech data and conversion plans. With step-by-step worksheets to design your own choice of max speed, range, or max miles/kwh. Detailed SUPPLEMENTS also for select cars (see below). 15-day money-back guarantee.

Years to compile but really now! Order yours at no risk, today.

20 VEHICLES: Box 194080, San Diego, CA 92119
Please send me your guaranteed:
□ EV CONVERSION GUIDEBOOK $14.50
□ GUIDEBOOK & 1 SUPPLEMENT $18.00
□ GUIDEBOOK & 3 SUPPLEMENTS $24.00
Include DETAILED SUPPLEMENT(S) for:
□ BETELGEUVE □ DYC □ DAT/UR 210 □ PAT 12D
□ FIESTA □ OMS □ RABIT □ REBEL $1.00

Circle No. 123 on Reader Service Card
David Ahl, Founder and Publisher of Creative Computing

You might think the term "creative computing" is a contradiction. How can something so liberal and logical as electronic computing possibly be creative? We think it can be. Consider the way computers are being used to create special effects in movies—image generation, coloring, and computer-driven cameras and props. Or an electronic "sketchpad" for your home computer that adds animation, coloring and shading at your direction. How about a computer simulation of an invasion of killer bees with you trying to find a way of keeping them under control?

Beyond Our Dreams

Computers are not creative per se. But the way in which they are used can be highly creative and imaginative. Five years ago when Creative Computing magazine first billed itself as "The number 1 magazine of computer applications and software," we had no idea how far that idea would take us. Today, these applications are becoming so broad, so all-encompassing that the computer field will soon include virtually everything!

In light of this generality, we take "application" to mean whatever can be done with computers, ought to be done with computers or might be done with computers. That is the meat of Creative Computing.

Alvin Toffler, author of Future Shock and The Third Wave says, "I read Creative Computing not only for information about how to make the most of my own equipment but to keep an eye on how the whole field is emerging.

Creative Computing, the company as well as the magazine, is uniquely light-hearted but also seriously interested in all aspects of computing. Ours is the magazine of computer science, graphics, games and simulations for beginners and relaxing professionals. We try to present the new and important ideas of the field in a way that a 14-year old or a Cobol programmer can understand. Things like text editing, social simulations, control of household devices, animation and graphics, and communications networks.

Understandable Yet Challenging

As the premier magazine for beginners, it is our solemn responsibility to make what we publish comprehensible to the newcomer. That does not mean easy; our readers like to be challenged. It means providing the reader who has no preparation with every possible means to seize the subject matter and make it his own.

However, we don't want the experts in our audience to be bored. So we try to publish articles of interest to beginners and experts at the same time. Ideally, we would like every piece to have instructural or informative content—and some depth—even when communicated humorously or playfully. Thus, our favorite kind of piece is accessible to the beginner, theoretically non-trivial, interesting on more than one level, and perhaps even humorous.

David Gerroll of Star Trek fame says, "Creative Computing with its unpretentious, down-to-earth lucidity encourages the computer user to have fun. Creative Computing makes it possible for me to learn basic programming skills and use the computer better than any other source.

Hard-hitting Evaluations

At Creative Computing we obtain new computer systems, peripherals, and software as soon as they are announced. We put them through their paces in our Software Development Center and also in the environment for which they are intended—home, business, laboratory, or school.

Our evaluations are unbiased and accurate. We compared word processing printers and found two losers among highly promoted makes. Conversely, we found one computer had far more than its advertised capability. Of 16 educational packages, only seven offered solid learning value.

When we say unbiased reviews we mean it. More than once, our honesty has cost us an advertiser—temporarily. But we feel that our first obligation is to our readers and that editorial excellence and integrity are our highest goals.

Karl Zinn at the University of Michigan feels we are meeting these goals when he writes, "Creative Computing consistently provides value in articles, product reviews and systems comparisons...in a magazine that is fun to read."

Order Today

To order your subscription to Creative Computing, send $20 for one year (12 issues) or $37 for two years (24 issues). Readers of Science News may circle 121 on the reader service card to be billed for a one-year subscription. If you prefer, call our toll-free number. 800-631-8112 (In NJ 201-540-0445) to put your subscription on your MasterCard, Visa or American Express card. Canadian and other foreign surface subscriptions cost $25 per year and must be prepaid. We guarantee your satisfaction or we will refund the entire subscription price.

Join over 80,000 subscribers like Ann Lewin, Director of the Capital Children's Museum who says, "I am very much impressed with Creative Computing. It is helping to demystify the computer. Its articles are helpful, humorous and humane. The world needs Creative Computing."
