

See the world as few others can with...

the new international atlas

This completely updated edition of an already highly-acclaimed atlas includes even more large-scale map coverage of England, Scotland, Ireland, Austria and portions of Germany and Italy. And a new, multi-color treatment of shaded relief portrays the shape of the land with greater clarity along with better readability for other map details. No

wonder it has the broadest world-wide distribution of any atlas, including more than 40 foreign editions.

It is still the first atlas to recognize that today's sophisticated audience wants detailed, balanced coverage of the entire world. Those somewhat unknown but timely "hotspots" like Iran and Afghanistan are more clearly explained in the new World Scene section with climate and population charts and topographical and natural resource maps.

When the original edition of this atlas was published in 1969, *Scientific American* said: "This new book is the best large single-volume world atlas available for general use." Taking more than a decade and several million dollars to create, it was the first atlas to involve a team of major, foreign cartographic houses.

Enlarged and completely up-to-date, the six consistent map scales of *the new international atlas* give increasingly greater detail for a view of the earth that few see—that of an astronaut returning from space. Approaching the earth, you first get a broad view from

many miles away. And the closer you get, the greater and more vivid the detail becomes. Just before touching down, you can clearly see the geographic intricacies and interrelations of even urban areas. *The new international atlas* gives you all of it—from the broad picture to the closest look and everything in between.

For these who want to see it all—*the new international atlas* gives a truly global look at their world.

568 pages / 11 x 14 $\frac{3}{4}$ "

SCIENCE NEWS

Less is more.

You'd have to wade through this much material to get the information in one issue of Science News.

Proof? Right here in every issue of our unique magazine, a weekly employing some of the finest science reporters and writers in the business. Journals are highly specialized and, by their very nature, six to twelve months behind the times.

Newspapers too often wait for the Spectacular and Stupendous, then give it three paragraphs. Digests leave you still hungry.

But Science News reports on the latest developments in all science fields, every week. And not just what's appeared in journals. We cover scores of scientific meetings, visit laboratories, interview researchers. And then put it all together for you. Concise. Thorough. Authoritative. Up-to-the-minute. And a joy to read. All for only \$19.50 a year.
