

# INTRODUCING THE KNOW-IT-ALL

The Canon hand-held statistical/scientific printing/display calculator with all the answers.

Costs just a fraction of large statistical/scientific calculators... yet handles the same functions.

Till now, if you wanted a calculator to handle complex scientific, statistical or engineering functions, you'd have to buy a big, bulky, expensive unit that you couldn't take with you to the construction site, the lab or use in the field. But now the Canon FP-10 gives all of these functions in a calculator that weighs less than a pound, measures just 4" x 7 1/4" x 1 1/8", and is priced for the individual rather than a giant corporation.

Displays answers in big, readable, blue digits... PRINTS out both numbers and words.

There's no guesswork with the FP-10, no erroneous figures in your calculations... because everything you punch in is recorded. It prints on tape so you can check your answers. It prints not only numbers... but words. Tells you what function key you've pushed, when the machine is clear and when you've made an error in your calculations. For simple calculations when you don't need a tape, you simply switch off the printer and use only the Digitron display.

Makes the most complicated scientific and statistical calculations simple. There's hardly any calculation you can't handle with this compact "know-it-all." Prints a trigonometrical value and then tells you if the value is the SINE, COSINE, TANGENT, LOGARITHM or NATURAL LOG. It gives you a choice of four different modes for either print or display: FIX, DIG, AUTO and ENG. It can store up to 4 levels of numbers and up to 11 levels of instructions including parenthesis.

You'll say "Thanks for the memories." The Canon FP-10 has keys for Recall Memory, Store Memory and Memory Plus. The Last Answer Recall Key acts as still another memory to add to its capability. It may be today's most memorable calculator.

Keys and switches for over 50 functions in all. If you're a statistician, engineer, student, scientist or anyone who works with complex calculations, you'll appreciate the sophistication of this compact Printing/Display Calculator that you can take with you anywhere. These keys and switches provide you with over 50 functions.

• Auto Mode Key • Open Parenthesis Key • Fixed Decimal Point Mode Key • Close Parenthesis Key • DIG Mode Key • Inverse Key • Sign Change Key • Pi Key • Exponential Key • Factorial Key • Reciprocal Key • Statistical Mode Key • Last Answer Recall Key •  $\Sigma x^2/\sigma^{n-1}$  Key •  $\Sigma x/\sigma^n$  Key • Store Memory Key • n/x Key • Memory Plus Key • SUM/DLT Key • Sine Key/Arc Sine Key • Cosine Key/Arc Cosine Key • Tangent Key/Arc Tangent Key • Degrees-Minutes-Seconds → Decimal Degrees Conversion Key • Decimal Degrees →

PRINTS OUT FIGURES, FUNCTIONS, CLEAR AND ERROR

Degrees-Minutes-Seconds Conversion Key • Common Logarithm Key • Common Antilogarithm Key • Natural Logarithm Key • Natural Antilogarithm Key • Square Root Key/Square Key • Power Key • Percent Plus/Minus Key • Polar → Rectangular Conversion Key • Rectangular → Polar Conversion Key • Print Key • Paper Feed Key • Gradient, Degree, and Radian Mode Switch • Power/Print Switch.

Never buy batteries. The Canon FP-10 operates on built-in rechargeable nickel cadmium batteries so you never have to spend money on battery replacement. It comes with an adapter/charger that powers the calculator on regular household current while the batteries are charging. There's no "down" time with the Canon FP-10.

Included with the calculator is a roll of 2 1/2" tape which is easily and inexpensively replaceable at any office supply store. The Printer uses a pop-in cassette-type ribbon which is also readily available at low cost. A complete 88-page instruction book is enclosed.

The low price will surprise you. You might expect a calculator that includes both a printer and display... a calculator that performs 50 complex functions... to cost many hundreds of dollars. But the fact is, the Canon FP-10—through this offer—can be yours for just \$125.00 plus \$3.95 for shipping and handling.

Try it for 15 days without risk. If the Canon FP-10 Scientific/Statistical Calculator isn't everything we say—and more—you may return it within 15 days for a full refund. The FP-10 is covered by a 90 day limited warranty from Canon U.S.A., Inc.

# BOOKS

BOOKS is an editorial service for readers' information. To order any book listed or any U.S. book in print please remit retail price, plus 50¢ handling charge for each book to **Book Order Service**, Science News, 1719 N Street, N.W., Washington, D.C. 20036. All books sent postpaid. Domestic orders only.

**AFTER MAN: A Zoology of the Future** — Dougal Dixon, introduction by Desmond Morris. The scenario is about 50 million years from now; the animals brought to life were created by contemplating a future evolution on our planet closely based on species that exist at present. The author's setting, in the distant future, has given the members of his new animal kingdom time to undergo dramatic changes in structure and behavior. Morris in the introduction indicates that Dixon has "created his animals so painstakingly that each kind of animal teaches an important lesson about the known processes of past evolution — adaptation and specialization, convergence and radiation." St. Martin, 1981, 124 p., color/b&w illus., \$14.95.

**ANNUAL REVIEW OF MEDICINE: Selected Topics in the Clinical Sciences, Vol. 32** — William P. Creger, Ed. Articles are concerned with such topics as the problem of obesity, chemical headaches and immune complexes in human disease. Annual Reviews, 1981, 624 p., illus., \$20.

**HIROSHIMA AND NAGASAKI: The Physical, Medical, and Social Effects of the Atomic Bombings** — The Committee for the Compilation of Materials on Damage Caused by the Atomic Bombs in Hiroshima and Nagasaki. A monumental 706-page collection of facts, figures and illustrations on the effects of the Hiroshima and Nagasaki bombings. Put together by a group of Japanese scientists, the book is not a narrative on the bombings, but is a must for those concerned with the scientific description of what has happened to the two cities and their people since the bombs were exploded (see p. 284). Basic, 1981, 706 p., illus., \$37.50.

**MILLENNIUM: Glimpses into the 21st Century** — Alberto Villoldo and Ken Dychtwald. Eighteen scientists and philosophers explore the key human qualities that have given birth to life as we know it today "and may very well generate an array of transformational possibilities in the near and distant future." The common theme is that we as a species are far from having completed our evolutionary development. J. P. Tarcher(HM), 1981, 319 p., illus., paper, \$8.95.

**THE MISMEASURE OF MAN** — Stephen Jay Gould. Discusses, in historical perspective, the claim that worth can be assigned to individuals and groups by measuring intelligence as a single quantity. Seeks to demonstrate both the scientific weaknesses and political contexts of this contention. Norton, 1981, 352 p., illus., \$14.95.

**SCIENCE ADVICE TO THE PRESIDENT** — William T. Golden, Ed. The most visible group in the U. S. concerned with decisions relative to the social management of science and technology has been the presidential science advisory mechanism in its various forms. This book presents the views of former presidential science advisers to provide the reader with insight into the complex social processes that affect the course of science and technology. Originally published in hardback in 1980 (SN: 7/18/81, p. 45; SN: 7/25/81, p. 59). Pergamon, 1981, 256 p., paper, \$9.95.

**THE VIRUS THAT ATE CANNIBALS** — Carol Eron. Stories about the ongoing battle against the smallest and most mysterious of all microorganisms that afflict humanity — the virus. Each of the six accounts is filled with interesting details and conveys the excitement of discovery. Macmillan, 1981, 193 p., illus., \$12.95.
