C. 20036. All books sent postpaid. Domestic orders only.

THE BODY MACHINE: Your Health in Perspective—Christiaan Barnard and John Illman, Eds. This beautifully illustrated book looks at the human body system by system, explores the way this complicated machine grows, develops and regulates itself. Crown, 1981, 256 p., color/b&w illus., \$19.95.

CLIMATES PAST AND PRESENT: Readings from American Scientist—Brian J. Skinner, Ed. The record of climatic variations as read from the geological record and the factors that control the climate today including human influence. W. Kaufmann, 1981, 135 p., color/b&w illus., paper, \$8.95.

DEPRESSION: The Facts—George Winokur. Describes depression as an illness, discusses causative factors, its management and specific treatment. Intended for those who suffer from depression and their families as well as family practitioners, hospital doctors and social workers. Oxford U Pr, 1981, 166 p., \$11.95.

THE EDUCATION OF KOKO—Francine Patterson and Eugene Linden. Chronicles Patterson's nine years as this female gorilla's teacher and surrogate mother. Koko is the first of her species to have acquired a human language. The book is intended to show "how Koko learned language and that Koko learned language; and to look at what a gorilla does with human language." HR&W, 1981, 224 p., color/b&w illus., \$15.95.

THE ENCHANTED LOOM: Mind in the Universe—Robert Jastrow. Recaps the astronomical setting for human existence and the early history of life and then focuses on intelligence and the brain. Tells how the brain evolved, the way it works, how it balances instinct and reason and "what it is evolving into." S&S, 1981, 183 p., illus., \$13.95.

LIFE IN DARWIN'S UNIVERSE: Evolution and the Cosmos—Gene Bylinsky. Begins at the creation of our universe with the Big Bang. Traces the chemical and biological evolution of life on earth and then transports the reader to other settings to view the possibilities that may exist on life-bearing planets that many believe circle other suns. Considers the chances of locating these other life-bearing planets and establishing contact with their inhabitants. Doubleday, 1981, 238 p., illus. by Wayne McLoughlin, \$17.95.

THE SUN SHINES BRIGHT—Isaac Asimov. A new collection of Asimov's science essays taken from *The Magazine of Fantasy and Science Fiction*. Doubleday, 1981, 250 p., \$13.95.

A THEORY OF MEDICAL ETHICS—Robert M. Veatch. An attempt by this specialist in medical ethics to state explicitly what the issues of a medical ethical theory are and what the classic answers to them have been, to go beyond to analyze these many positions of medical ethics and to work out what might be called a contract or covenant theory of medical ethics. Basic, 1981, 387 p., \$20.95.

WHAT PSYCHOLOGY KNOWS THAT EVERYONE SHOULD—Daniel Goleman and Jonathan Freedman. A collection of some of the more important and interesting findings of modern psychology. Written for the general reader to show how fascinating psychology can be and some of the things psychology tells us about ourselves. Lewis Pub(Greene), 1981, 270 p., illus. by Al Jaffee, \$12.95.

Science in Traditional China

A Comparative Perspective

Joseph Needham

In this delightful, informal book, Joseph Needham exhibits the depth of his knowledge of Chinese science. With dazzling insight, he examines the philosophy, social structure, arts, crafts and military strategies employed by this fascinating culture, and makes comparisons to similar elements in Indian, Hellenistic, and Arabic cultures.

"A fascinating summary of Needham's views on Chinese science... A most significant and important book."

—I. Bernard Cohen,
Harvard University

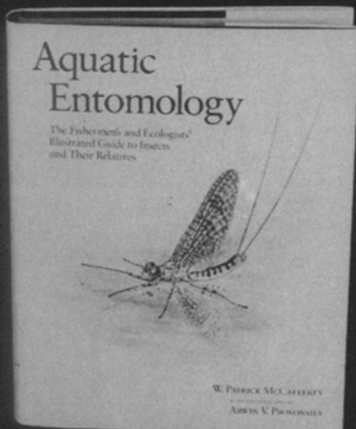

"Stimulating and absorbing reading... whets the appetite for more and more."

—Kirkus Reviews
