

From outer space to life on earth...

THE SCRIBNER SCIENCE LIBRARY

New and timely books

THE FIRST STARGAZERS An Introduction to the Origins of Astronomy James Cornell

This fascinating survey of a new branch of science, archaeoastronomy, describes the techniques that have been used to prove that many ancient monuments—from Stonehenge to Chichen Itzá—were actually observatories for primitive man. "A lively summary... His grasp of the subject is firm, his research unimpeachable." —*N.Y. Times Book Review*. Illustrated. \$15.95.

SCIENCE AND THE PARANORMAL George O. Abell and Barry Singer, Editors

Nineteen experts, including Carl Sagan and Martin Gardner, examine "through the lens of science" some widely accepted paranormal phenomena—UFO's, Bigfoot, psychic healing, Kirlian photography, the Bermuda Triangle, and more. "In the best sense, this book presents the view of the devil's advocate." —*Library Journal*. Illustrated. \$17.95

DAYTIME STAR The Story of Our Sun Simon Mitton

A clear nontechnical introduction to the astronomy and physics of the sun, the solar system, and the universe, from ancient myths to modern attempts to harness energy from the sun. "A splendid account of what we know and conjecture." —Edmund Fuller, *Wall Street Journal*. Illustrated. \$14.95

THE MALE From Infancy to Old Age Sherman J. Silber, M.D.

A world-famous urologist and specialist in male sexual problems presents the first lucid, fact-filled guide to the male sexual system: how it works, why it fails (and what to do when something goes wrong). Line drawings. \$12.95

ARE WE ALONE? The Possibility of Extraterrestrial Civilizations James S. Trefil and Robert T. Rood

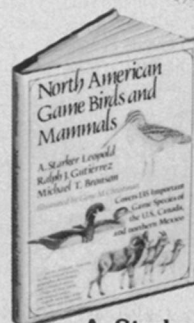

Two noted scientists chronicle the searches into extraterrestrials and calculate—optimistically, conservatively, and pessimistically—the possibility of life in outer space. "A clear, much-needed analysis of how far wrong we may have gone in assuming we live in a galaxy teeming with advanced civilizations." —*Science Digest*. Illustrated. \$14.95

X-RAY ASTRONOMY P.W. Sanford and J.L. Culhane

"The development of x-ray astronomy during the last three decades may be as important as Galileo's development of the telescope... this book traces the brief but exciting history of the advances made to date, including research into black holes, quasars, and galactic clusters." —*Library Journal*. Illustrated. \$25.00

EARTHLY PLEASURES Tales from a Biologist's Garden Roger B. Swain

The science editor of *Horticulture Magazine* presents "new insights into the mysteries and science of nature while revealing his admiration for the homely details of human life... an unusual collection of philosophical essays that make for delightful reading." —*New York Times*. Illustrated. \$10.95

NORTH AMERICAN GAME BIRDS AND MAMMALS

A. Starker Leopold,
Ralph J. Gutiérrez,
and Michael T. Bronson

"This book can be an important contribution to the fund of knowledge that may ultimately decide the fate of wildlife in America... Scientifically researched histories and ecological backgrounds and prospects for 135 of the important avian and terrestrial animal species of the United States, Canada, and northern Mexico. Excellent drawings and range maps, coupled with an amplifying section of salient characteristics for each species." —*N.Y. Times*. Illustrated. \$19.95

FROM ATOMS TO QUARKS An Introduction to the Strange World of Particle Physics James S. Trefil

"A great book for the inquisitive reader... the author has successfully put together the important discoveries in human efforts to understand the building blocks of matter. Starting with discoveries on the atom, the author leads the reader through discoveries within the nucleus, to the elementary particles, and finally to quarks... Excellent." —*The Physics Teacher*. Illustrated. \$12.95
