Spiders

E.O. Wilson: Let me remind you that people everywhere, a large percent of the population, at a very early age have already developed a deep horror at the sight of snakes or spiders with nothing more than gentle nudging from their parents, if that. Yet, in spite of the fact that parents constantly reinforce their children against going near electric sockets, automobiles, knives and the like, phobias against such objects rarely develop.

Marvin Harris: Let's go back again to the possibility that these phobias are genetically programmed – which I'm willing to grant. The overwhelming bulk of the socially conditioned response repertoires of different human societies consists, by your own admission, of culturally determined rather than genetically determined traits. Then it seems to me that when one offers a cogent culturological explanation of these phobias, it has to be considered that this explanation is the only one offered in isolation.

from a debate between E.O. Wilson and Marvin Harris on sociobiology. In *The Sciences*. From family constellations to galaxies, *The Sciences* takes the critical look. Handsome, original, lively, *The Sciences* represents the best science commentary you'll find anywhere on human behavior, culture, the physical sciences — by Ashley Montagu, Stephen Jay Gould, B.F. Skinner, Napoleon Chagnon, Peter Medawar. ... Subscribe today. It's only \$12.50 a year.

The Sciences. More than science.

Here's my check or money order for \$12.50 (\$2.50 off the newsstand price) for the next ten issues of **The Sciences**. Foreign individuals add \$5.00 Foreign institutions add \$10.00 US institutions add \$5.00

The Sciences
2 East 63rd Street
New York, N.Y. 10021

Published by The New York Academy of Sciences SCNW

... emergence of state-organized societies or the emergence of stratified classes and castes. The enormous differences between industrial civilization and pre-industrial societies, peasant or village ways of life and band organizations – all can be explained by anthropologists at the culturological level.
