BOOKS is an editorial service for readers' information. To order any book listed or any U.S. book in print please remit retail price, plus \$1.00 handling charge for each book, to **Book Order Service**, Science News, 1719 N Street, N.W., Washington, D.C. 20036. All books sent postpaid. Domestic orders only.

**ARTHRITIS AND RHEUMATISM: The Facts** — J. T. Scott, introduction by Dorothy Eden. Sets out for the general reader what is known about the surprisingly large number of forms of arthritis and the consequently differing treatments. Discusses the alleviation of pain and the slowing up of the depredation of the disease. Oxford U Pr, 1981, 123 p., illus., paper, \$5.95.

**THE DOCTOR'S GUIDE TO YOU AND YOUR COLON** — Martin E. Plaut. Presents information about bowel functions, simple bowel disorders and serious diseases. Distinguishes between common disorders, which should not be mistaken for more serious conditions such as diverticulitis, ulcerative colitis and cancer of the colon. Har-Row, 1982, 138 p., illus., \$10.95.

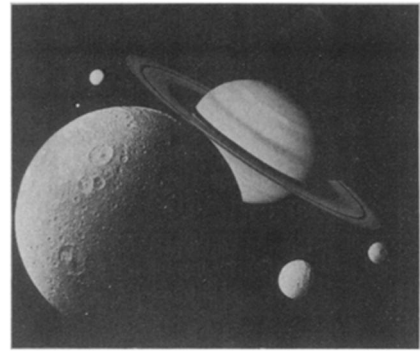

**EXPLORING THE EARTH AND THE COSMOS: The Growth and Future of Human Knowledge** — Isaac Asimov. A readable account of our growth in knowledge of space, time, matter and energy from earliest times to the present. This wide-ranging volume tells how people have learned and continue to learn about their world from the great migrations of prehistory, to the space probes of today, to the barely dreamed of journeys of tomorrow. Crown, 1982, 339 p., \$13.95.

**ILLUSTRATING NATURE: How to Paint and Draw Plants and Animals** — Dorothea and Sy Barlowe. The portrayal of natural history subjects is a highly specialized branch of general illustration. To depict a particular creature in its natural habitat requires the consideration of many different aspects of the animal's life. The virtues of patience, meticulousness and an almost childlike sense of wonder are the prerequisites for the dedicated nature illustrator. Viking Pr, 1982, 111 p., color/b&w illus., \$25, paper, \$14.95.

**THE LADY OR THE TIGER?: And Other Logic Puzzles** — Raymond Smullyan. An entertaining series of problems — paradoxes, metapuzzles, number exercises and brain twisters — related to important concepts of contemporary logic and mathematical theory. In the first half of the book an array of imaginary characters pose questions, giving just enough information to enable the reader to solve problems of increasing difficulty. The last section is a mathematical novel that features Godel's theory of undecidability. Knopf, 1982, 226 p., \$13.95.

**THE MAPMAKERS** — John Noble Wilford. The story of how earth and then earth's nearest neighbor came to be mapped. The story has many characters: scholars and scientists, soldiers and sea captains, explorers and adventurers, monks and clockmakers, to name a few. The first two parts of the book are devoted to the achievements of cartography and geodesy prior to the 20th century. The rest of the book focuses on the 20th century, a time of new technologies, when so much of what was once thought unmappable has come to be mapped. Originally published in hardback in 1981. Random, 1982, 414 p., illus., \$8.85.

## Voyager Visions

We now offer five stunning full-color posters featuring highlights of the Voyager missions to Jupiter and Saturn. These posters measure 22½ x 29", are mailed rolled, and are suitable for framing.

- APVJ-1 Jupiter
  - APVS-1 Saturn
  - APVJ-2 Jupiter with Four Moons
  - APVS-2 Saturn with Six Moons
  - APVS-3 Final Look at Saturn
- \$8.50 for three posters**  
**\$13.00 for all five posters**

**(\$2.00 for complete catalog, credit applied toward next purchase)**

Foreign orders add \$2.00 for postage.

*A Major Rethinking of Arteriosclerosis. . . . .*

## BEYOND CHOLESTEROL: Vitamin B<sub>6</sub>, Arteriosclerosis, and Your Heart

For years experts have been telling us about the risk factors behind heart disease. Yet despite warnings that stress, smoking, lack of exercise, and especially high cholesterol, are all risks to the heart, deaths due to heart attacks and strokes continue to rise in America.

In **BEYOND CHOLESTEROL**, Gruberg and Raymond for the first time have attempted a major re-examination of the factors that cause heart disease. Through careful research and examination of all the data, they have been forced to rethink the theories on arteriosclerosis. Evidence now points to an important link between our high intake of protein, and our relatively low intake of Vitamin B<sub>6</sub>. Without it, a toxic substance called homocysteine builds up in the blood, and it is this which eventually causes the clogging of the arterial walls. They argue that few Americans get even the minimum Recommended Daily Allowance (RDA). "We are saying, in fact, that Americans are vitamin B<sub>6</sub> deficient," states Raymond.

**BEYOND CHOLESTEROL** is a meticulously researched and compiled work, and is very persuasive in refuting the generally accepted theories on heart disease. It gives clear, understandable information concerning the medical and experimental evidence behind the homocysteine theory of arteriosclerosis. It contradicts none of the familiar facts and observations, but explains them from a new standpoint, and goes further to suggest new measures of prevention and therapy. This book must be seen as a breakthrough in medical science.

Please send me \_\_\_\_\_ copy(ies) of *Beyond Cholesterol* @ \$12.20 each delivered. My check or m.o. is enclosed in the amount of \$\_\_\_\_\_.
