

The Plant World

An illustrated encyclopedia to the main species of plants used by man. It includes the major and minor food crops, the timber species, herbs and spices, medicinal and drug plants, hallucinogens and beverage plants, as well as those that provide fibers, cork, tanning dyes, resins, starches, oils, waxes, and countless other products. In addition, there is a selection of the most important group of general plants containing species cultivated in parks and gardens, in greenhouses and on streets. Botanical curiosities and lower plants (algae, fungi, mosses and ferns) are also well represented.

Three hundred sixty eight pages, with 2200 entries arranged alphabetically under the scientific generic name or the popular name, and 800 species illustrated by photographs or artwork.
