In the laboratory... at home... in the field

The **Asahi Pentax Roof Prism Monocular** is a high precision optical instrument which combines low power microscope and low power telescope into one unit.

The unique design incorporates roof prism optics so that the image is seen positionally correct instead of upside down.

As a microscope, its extremely practical 25X magnification makes it an indispensable working tool for a variety of uses in the laboratory, at home, in the field and at work. In the life sciences, for identifying pests or mold spores. In electronics, for quality control in printed circuits. In printing, for relaxed viewing of dot patterns. In hobbies, for closeups of stamps and coins.

The unit is so simple to operate that it does not require any special training or maintenance. Merely place it over the object to be studied, focus and view.

The Monocular can also be used as an 8X telescope by simply removing the closeup lens. It is ideal for hand held viewing in sports events, concerts, or other such uses as mountain climbing, overseeing construction work, golf, etc.

In the microscope mode, the Monocular permits measuring distances from 0.1mm to 4mm as you would by a ruler by centering the scale over the object. In the telescope mode, the scale can be used to estimate the distance to objects whose height is known through the use of a simple formula.
