

Life Spans Or How Long Things Last

A unique and intriguing compendium certain to entertain and enlighten even the most discerning aficionado of popular almanacs and list-type books. It cites and describes the life expectancy of most everything and anything under the sun: human beings (all over the globe and throughout history), animals (both real and imaginary), plants and inanimate objects of the natural world, as well as the foods we eat and the products we manufacture.

Holt, Rinehart and Winston, 1980, 265 pages, 5½ x 8½, paperback, \$5.95.

by Frank Kendig & Richard Hutton

THE SOURCE

Completely Revised & Updated

Houghton Mifflin is proud to announce the publication of the new edition of FREQUENCY ANALYSIS OF ENGLISH USAGE. This book is the analytical source of all information pertaining to *The Brown Standard Corpus of American English* and offers word frequency research on every term included in the Corpus. This is the definitive reference work in the field and will prove invaluable to all libraries, as well as individuals involved in linguistics, language learning, psycholinguistics, lexicography, word processing, artificial intelligence and other related areas of interest.

Some of its features include:

- Frequency analysis organized in a lemmatized list
- Alphabetized frequency list of all words in the Corpus, with a grammatical class indicator for each word
- Identification of all homographs with frequency figures
- Statistically oriented grammatical studies
- Studies of sentence length in relation to sentence complexity
- Uses of passive voice, perfect and progressive tenses
- Frequency and distribution of grammatical classes
- Rank ordered frequency lists

Books is an editorial service for readers' information. To order any book listed or any U.S. book in print please remit retail price, plus \$1.00 handling charge for each book, to **Book Order Service**, Science News, 1719 N Street, N.W., Washington, D.C. 20036. All books sent postpaid. Domestic orders only.

Bulimarexia: The Binge/Purge Cycle — Marlene Boskind-White and William C. White, Jr. Describes this bizarre and secret eating disorder and the dangerous long-term consequences. For these vulnerable young women slimness represents perfection, and relentless weight control becomes their maladaptive reaction to stress. The authors believe that this behavior is learned and can be unlearned. Norton, 1983, 219 p., \$15.

Common Sense Wind Energy — California Office of Appropriate Technology. A guide to making more energy from a source available in some areas. Helps you understand how to determine if your particular area is suitable for harnessing the wind's energy and how to choose appropriate equipment for a wind energy system that will fill your needs. Brick Hse Pub, 1983, 83 p., illus., paper, \$8.95.

The Human Cycle — Colin M. Turnbull. Describes the stages of man — childhood, youth, maturity and old age in various cultures such as the Mbuti of Zaire, the Hindus of Banaras and middle-class Western society. Shows that the stages are identical in their meaning in every culture. Suggests that the problems of love, loneliness, growing up and growing old may be handled far better in societies more "primitive" than our own. S&S, 1983, 283 p., \$14.95.

In the Shadow of Man — Jane Goodall. The research presents a fascinating picture of chimpanzee life in its natural habitat. Originally published in 1971, it is one of the most enthralling stories of animal behavior ever written, and, as the foreword by David Hamburg states, "helps to put man in a new perspective." The photographs by Hugo van Lawick add immeasurably to the text. HM, 1983, 297 p., illus., paper, \$9.95.

Open Heart Surgery: A Guidebook for Patients and Families — Ina L. Yalof. Presents an informative and comprehensive overview of heart surgery procedure from diagnosis to recovery, together with its physical and emotional effects on the patient and the family. Random, 1983, 216 p., illus., paper, \$7.95.

Prehistoric Times: Readings from Scientific American — Introduction by Brian M. Fagan. Eighteen articles provide a readable summary of the major developments of human prehistory. W H Freeman, 1983, 262 p., color/b&w illus., \$24.95, paper, \$12.95.

Uncommon Sense: The Life and Thought of Ludwig von Bertalanffy (1901-1972) — Mark Davidson, foreword by R. Buckminster Fuller, introduction by Kenneth E. Boulding. A biography of this little-known scientific genius of our era, the founder of general systems theory (GST). It is a way of looking at a wide range of problems with insights from knowledge about the way natural systems behave. GST is a conceptual tool that helps us deal more effectively with the modern systems that surround us. J P Tarcher (HM), 1983, 247 p., \$15.95.

Weather in Your Life — Louis J. Battan. Examines the weather and its effects, presents a non-technical introduction to the basic principles of atmospheric science and suggests how weather and climate information can be used to make life safer, healthier and happier. W H Freeman, 1983, 230 p., illus., \$19.95, paper, \$10.95.
