

# The Audubon Encyclopedia of Animal Life

Edited by John Farrand Jr.

The most comprehensive, educational, and entertaining one-volume reference book ever published on the world of animals.

Every group of animals—protozoans, sponges, mollusks, insects, starfishes, and other invertebrates, as well as fishes, amphibians, reptiles, birds, and mammals—is covered in depth. All the fascinating aspects of life in the animal world are depicted: physical characteristics, courtship, mating, birth, growth, habitat, defense mechanisms, and ecological adaptations.

Lavishly illustrated, with more than 1,000 photographs, including 583 plates in full color. The 350,000 word text was written by a group of distinguished scientists who are authorities in their respective fields.

Pictures and descriptions of hundreds of animals, including

- Fruit Bat
- Humpback Whale
- Lesser Panda
- Rainbow Bee-eater
- Magnificent Rifle Bird
- Frilled Lizard
- Banded Sea Snake
- African Clawed Frog
- Tripod Fish
- Bucktoothed Parrotfish
- Trapdoor Spider
- Atlas Silkworm
- Bear Paw Clam
- Daisy Coral

606 pages, 9% by 11½, hardcover, \$45.00
