# A Feeling for the Organism

*The Life and Work of Barbara McClintock*

**EVELYN FOX KELLER**, *Northeastern University*

The engrossing saga of a scientist and her science, *A FEELING FOR THE ORGANISM* is the story of the geneticist Barbara McClintock, for fifty years one of America's foremost female researchers. McClintock's pioneering work under the microscope led to the discovery of gene transposition and to the inference that genes are rearranged in the course of development.

Interweaving McClintock's words with those of her fellow researchers, the author focuses on the crucial relationships between creativity and validation, between individual and community, that underlie the drama in this compelling story.

"Evelyn Fox Keller took on a heavy responsibility in writing about a woman with one of the most powerful intellects ever applied to science. This ambitious book has kept its promise."—*Discover*

"A clear and exciting picture of one of the most remarkable scientists who ever practiced genetic medicine, and its reading will entertain and enlighten."—*The San Diego Union*

Cloth, 235 pages, 16 illustrations. \$14.95
