The Atlas of Archaeology
 Edited by Keith Branigan

Describes fifty important sites throughout the world, providing a unique history of both the culture of past civilizations and the development of archaeology as a science.

Sites described include: Lascaux, the cave-painting site in France; Knossos in Crete; Pompeii in Italy; the Olduvai Gorge in Tanzania; the Valley of the Kings in Egypt; Catal Huyuk, the oldest known urban complex; the Ming Tombs in Peking; the rock-cut monastic complex in Ajanta, one of India's most famous artistic treasures; Anuradhapura, the ancient capital of Ceylon (Sri Lanka); Chichen Itza in Mexico; Machu Picchu, the "Lost City of the Incas" in Peru; and the cliff dwellings of the Mesa Verde in the United States.

Each site is examined from two viewpoints: first, through its excavation, illustrating techniques employed and finds discovered, and then by reconstructing the way of life of its people.

Clearly drawn regional and site maps accompany the text, as do illustrations of major artifacts and artwork reconstructions of the site's original appearance or its people's way of life. In addition, a gazetteer is linked to the regional maps, pinpointing the world's most important archaeological sites.

Over 300 photographs, many in color, with drawings, diagrams and maps. St. Martin's Press, 1982, 240 pages, 9 1/4 x 11 3/4, hardcover, \$25.00.

There has never before been a book like this one. *The Human Body* enables you to discover for yourself what happens inside your body.

Splendid full-color pop-up illustrations show in amazingly complete detail the intricacies and wonders of the human body. From the skeleton outward, the body is depicted in a series of moving parts and overlapping forms that show how the body works and its internal structures interrelate. Each model is described with remarkable clarity and precision by Dr. Jonathan Miller, who is our guide on this anatomical journey.

"OPEN THE COVER and a sophisticated color construction of a human head, half skull, half facial muscles, springs out from the centerfold, slowly closing wide-open jaws. The reader cannot resist. . . . He turns the page and a three-dimensional model of the interior of an ear pops up; by pulling a tab at the corner of the page, he opens the snail-shaped cochlea, baring its intricate mechanism. Another page, another tab, and the valves of a cutaway model of the heart open and close while the muscular walls seemingly come alive. This working anatomy lesson covers its subject admirably, inward and outward. As the reader—the book should appeal to teen-agers as well as adults—operates the brilliantly conceived scale models, he begins to understand how we see, hear, breathe, even think; how muscles contract, how red blood cells speed oxygen around the blood stream; how cartilage keeps the bones from rubbing together. . . . **As both an atlas of anatomy and a work of art, *The Human Body* is a visual marvel, a movable feast for the mind.**" —*Discover*

"The ultimate in pop-up books, and the 'all ages designation is absolutely correct. A bright young child, a teenager curious about how his or her unpredictable body works, and the legion of Jonathan Miller fans will pore over this remarkable piece of work Stupendous."

—*Philadelphia Inquirer Books*

"Beautifully entertaining and instructive." —*People*
