Subscription Department
231 West Center Street, Marion, Ohio 43302

Subscription rate: 1 yr., \$27.50; 2 yrs., \$47.50;
3 yrs., \$67.00. (Foreign postage \$5.00 additional per
year.) Change of address: Four to six weeks' notice is
required. Please state exactly how magazine is to be
addressed. Include zip code. For new subscriptions
only call (1) 800-247-2160. Printed in U.S.A. Second
class postage paid at Washington, D.C. Title
registered as trademark U.S. and Canadian Patent
Offices. Published every Saturday by SCIENCE
SERVICE, Inc., 1719 N St., N.W., Washington, D.C.
20036. (202-785-2255)
ISSN 0036-8423

Letters

More religion

The letter (SN: 4/14/84, p. 227) under the heading *Religious thoughts* referred to "Clergy Ponder the New Genetics" (SN: 3/24/84). He says, "... they find themselves in a classical paradox. If there is an omnipotent, omniscient God. He has obviously allowed the scientists to discover these techniques and to apply them. If there is no such God, the clergy have no more standing than the corner bartender."

May I point out that the clergy finds no such paradox — it *knows* there is an omnipotent, omniscient God. We, who are constrained by the scientific method, face the issue whether scientific knowledge alone is enough to provide a sound basis for judgment in such a keystone technology.

If Science is omnipotent and omniscient, it has the ability and wisdom to plan evolution.

If Science has no such qualities, then we had better consult everyone for input — including the corner bartender.

Oliver R. Odhner
Perkiomenville, Pa.

This Week

- 324 Cancer Vaccine Trials in Monkeys Hold Promise
- 324 Infection in the elderly: Who's on second?
- 325 Court rules against gene-splice field test

- 326 Copyright for chips?
- 326 Ancient Maya tomb discovered
- 327 Ancient technology: Pouring a pyramid

Articles

- 328 Escape Into Chaos
Cover: Experimental mathematics takes on a chaotic, colorful look when computer graphics is combined with studies of the behavior of iterated mathematical functions. Shown is the result of iterating the product of a complex number and the exponential function, e^z . The colors tell how "quickly" a given point goes to "infinity" and show regions where the function is said to behave chaotically. (Illustration: C. Small, C. Mayberry, S. Smith/Boston Univ.)

Not to worry

Your article "Virus Hunter's Guide" (SN: 5/12/84, p. 292) brought into perspective the breadth of our activities to provide surveillance methods by which to isolate and identify waterborne viruses. Finding human enteric viruses in rivers, lakes and other waters almost always connotes fecal contamination. [While] current *wastewater* treatment processes are not likely to remove all viruses from effluents discharged to the environment, in the article unfortunately my comment was transposed to filtration plants used for *drinking water* treatment. I am sure your readers will be glad to learn that viruses are not constantly emitted in drinking water.
