

"There are no symbols worth the name, and no diagrams whatever, in this book; and it is only improved by their absence. It is rare to find a book that displays depth of understanding yet avoids technicalities: this one does, and is charming, eloquent and witty to boot."

—Ian Stewart,
New Scientist

"...I must say Michael Guillen, a mathematical physicist at Cornell University and a contributing editor to *Science News* magazine, has let a little sunlight in with his wonderful collection of essays..."
—Christopher Lehmann-Haupt,
New York Times

Tarcher/Houghton-Mifflin Co., 1983, 204 pages,

Guillen calls upon both ancient and contemporary masterminds to bring to life such concepts as paradox, randomness, and probability. From the familiar contributions of Euclid, Aristotle, Archimedes, Pythagoras, and Descartes, to the controversial theories of Reimann, Cantor, Frege, Poincaré, Russell, and Gödel, Guillen enlivens his authoritative discussion of their work with anecdotes of their infighting, alliances, and quirks.

KEW:

Gardens for Science and Pleasure

A feast for garden-lovers everywhere

This lavishly illustrated book reveals the breathtaking beauty and notable contributions of one of the world's most renowned gardens. It is at once a fascinating exploration of Kew's highly varied garden areas, ornamental structures, greenhouses and lively history, and an account of the practical aspects of horticulture and landscaping.

The Royal Botanic Gardens at Kew, and at Wakehurst Place, Kew's annex in the Sussex countryside, have an international reputation for their beauty, their remarkable collection of plants and their scientific research. The range of plants grown outdoors, perhaps because of the notorious British climate, is truly astonishing.

As well as being a record of these remarkable gardens, this book provides a fascinating insight into the many functions and responsibilities of this most beautiful of scientific institutions.

Edited by F. Nigel Hepper
