Epigrammata

In "Atom detection improves, on the surface" (SN: 8/18/84, p. 101), you cited a "famous theologian" in reference to the motto *Abusus non tollit usum*. I would greatly appreciate it if you could furnish me with the full reference for this motto.

Robert Sovner, M.D.
Cambridge, Mass.

It's attributed to Thomas Aquinas, but I cannot cite chapter and verse. It is so widely quoted in discussions of moral philosophy that it has gotten into Webster's New Collegiate Dictionary as a Latin proverb without attribution.

—D.E. Thomsen

In "Fractional Hall Effect by Electrons in Chorus" (SN: 8/25/84, p. 116), you attribute to "a famous British physicist" the response "What use is a newborn baby?"

In an 1864 biography of Benjamin Franklin by James Parton, the response is attributed to Franklin, on the authority of the memoirs of a Baron de Grimm. Who was your man?

Arthur J. Morgan
New York, N.Y.

I was thinking of either Faraday or Lord Kelvin, but it may have been Franklin. All three were good at one liners. One evening at dinner, James A. McNeill Whistler, who was famous for wit as well as for his frugality in using his mother as an artist's model, delivered a striking epigram. Oscar Wilde remarked, "I wish I had said that." Whistler replied, "You will, Oscar, you will."

—D.E. Thomsen

The wave wasn't tidal

I particularly enjoyed "Ancient Quake Shakes Up the Past" (SN: 8/18/84, p. 100) and look forward to further reports on the findings as the excavation progresses. I was, however, distressed to see a scientific publication use the common, but in this application erroneous, term "tidal wave" to refer to what is correctly called a seismic sea wave or tsunami.

'Poison' inspires poetry

The inference of Panasiuk and Bills ("Beware the sprouts of sorghum," SN: 8/18/84, p. 109), as to the lethality of sorghum sprouts in particular and hydrocyanic acid (HCN) in general, struck the heart of this poet — to the core. The muse gave me no rest until I produced at least a moderately general rebuttal:

Behold, an apple! See this little bore?
My knife. We'll find a worm within the core,
Seeking a life-force there with wriggling
glee.
(Why is that force "denied" to you and me?)

The worm's no fool to seek the poisoned
seed,
No voice impels, just pure and primal need,
While wise men speak to us with cultured
skill:
Beware of apple seeds; they're known to
kill.

Grave contradiction here — this gourmet worm!

Should not its eating mode make "wise men" squirm?

Several experts have suggested that HCN has its place in creation and health. HCN nay-sayers might consider that, while populations subsisting on HCN-rich diets may be at risk from too much of the same, scientists do have the responsibility not to nay-say but to present this matter aright on behalf of those populations that have a diet almost totally deficient in HCN. Those lives, too, are at risk — because of the deficiency.

Joan Krucina
Lindley, N.Y.

If FDA sanctions the use of 200 ppm of hydrocyanic acid in lima beans, then by what warped logic does EPA order our sewers to be cleansed down to 0.65 ppm?

Hans F. Hanson
Cerritos, Calif.

Correction: "Enzyme filter thickens thinned blood" (SN: 9/8/84, p. 153) erroneously linked a form of neonatal jaundice to an obstruction of bile ducts "in the kidney." Such ducts convey bile from the liver, not the kidney.

Correction: In "Superconducting collider: A triple start" (SN: 9/22/84, p. 181), the project will require 1.5 million pounds of niobium-titanium alloy, not 11.5 million pounds. In addition, the SSC will collide protons against either protons or antiprotons.

THE BROKEN BRAIN

*The Biological Revolution
in Psychiatry*
By Dr. Nancy C. Andreasen

Science News Book Order Service
1719 N Street N.W.
Washington, D.C. 20036

Please send _____ copy(s) of
The Broken Brain. I include a check, payable to Science News Book Order Service, for \$16.95 plus \$1.00 handling (total \$17.95) for each copy. Domestic orders only.

In **The Broken Brain**, Dr. Andreasen provides a systematic and elegant account of contemporary psychiatry and its radical new developments. She first introduces the reader to the three principal schools in the field: the Freudian, the behaviorist, and the biomedical; the last, she feels, being the only one that has been effective in dealing with the major mental illnesses. Dr. Andreasen characterizes these disorders by means of precise and vivid case histories and prepares the reader to follow the new understanding of them with the help of a detailed introduction to the various parts, functions and systems of the brain.
